HVDC User Group Meeting
ABBs comments on NC Draft

Power and productivity
for a better world™

General comments from ABB

- The NC impose all on-shore requirements on the DC connencted PPM
  - Connected off-shore will generate additional cost and hamper the development and market.
  - A separate code, section for off-shore not adding more on top should be more feasible

- Some articles define unneccesary cost drivers without adding benefits, will be commented during todays walk-through of the NC

- Unclear definition on the consent of the HVDC System Owner shall not be unreasonably withheld – give the relevant TSO the right to drive cost if no clear definition exist

- Simulation models section put most demand on the HVDC Owner not on the TSO. If a good design should be done the TSO has to deliver good models as well
