16 **provided at [cim@entsoe.eu](mailto:cim@entsoe.eu)**

17 **NOTE CONCERNING WORDING USED IN THIS DOCUMENT**

18 The force of the following words is modified by the requirement level of the document in which  
19 they are used.

- 20 • SHALL: This word, or the terms "REQUIRED" or "MUST", means that the definition is an  
21 absolute requirement of the specification.
- 22 • SHALL NOT: This phrase, or the phrase "MUST NOT", means that the definition is an  
23 absolute prohibition of the specification.
- 24 • SHOULD: This word, or the adjective "RECOMMENDED", means that there may exist valid  
25 reasons in particular circumstances to ignore a particular item, but the full implications must  
26 be understood and carefully weighed before choosing a different course.
- 27 • SHOULD NOT: This phrase, or the phrase "NOT RECOMMENDED", means that there may  
28 exist valid reasons in particular circumstances when the particular behaviour is acceptable  
29 or even useful, but the full implications should be understood and the case carefully weighed  
30 before implementing any behaviour described with this label.
- 31 • MAY: This word, or the adjective "OPTIONAL", means that an item is truly optional.

## 339 1 Introduction

340 The remedial action profile enables an exchange of the remedial actions for the purpose of NC  
341 related business processes.

342 A remedial action means any measure applied by a TSO or several TSOs, manually or  
343 automatically, in order to maintain operational security.<sup>1</sup>

344 An available remedial action is a remedial action which is available to solve identified  
345 constraints. It includes the needed technical and cost information.<sup>2</sup>

346 The available remedial actions are input data for security analysis.

347 The available remedial action profile enables the exchange of both curative and preventive  
348 remedial actions. Grid state alterations (the change in the power system state that should be  
349 applied) are defined for each remedial action. The definition of grid state alterations allows for  
350 constraining or further precisising some of the properties available in the IGM. Grid state  
351 alterations can be configured for every parameter of the steady state hypothesis instance data  
352 from the IGM. The available remedial action profile provides information on the availability of  
353 the remedial actions. In cases where it is necessary to only update the status of the remedial  
354 action, only an instance of RemedialAction class can be exchanged without any other objects  
355 from the profile.

## 356 2 Application profile specification

### 357 2.1 Version information

358 The content is generated from UML model file CIM100\_CGMES31v01\_501-  
359 20v02\_NC22v95\_MM10v01.eap.

360 This edition is based on the IEC 61970 UML version 'IEC61970CIM17v40', dated '2020-08-24'.

- 361 - Title: Remedial action Vocabulary
- 362 - Keyword: RA
- 363 - Description: This vocabulary is describing the remedial action profile.

372

### 373 2.2 Constraints naming convention

374 The naming of the rules shall not be used for machine processing. The rule names are just a  
375 string. The naming convention of the constraints is as follows.

376 "{rule.Type}:{rule.Standard}:{rule.Profile}:{rule.Property}:{rule.Name}"

---

<sup>1</sup> [SOURCE: CACM art.2.13]

<sup>2</sup> [SOURCE: 2019 Inter-RSC report]

377 where

378 rule.Type: C – for constraint; R – for requirement

379 rule.Standard: the number of the standard e.g. 301 for 61970-301, 456 for 61970-456, 13 for  
380 61968-13. 61970-600 specific constraints refer to 600 although they are related to one or  
381 combination of the 61970-450 series profiles. For NC profiles, NC is used.

382 rule.Profile: the abbreviation of the profile, e.g. TP for Topology profile. If set to “ALL” the  
383 constraint is applicable to all IEC 61970-600 profiles.

384 rule.Property: for UML classes, the name of the class, for attributes and associations, the name  
385 of the class and attribute or association end, e.g. EnergyConsumer, IdentifiedObject.name, etc.  
386 If set to “NA” the property is not applicable to a specific UML element.

387 rule.Name: the name of the rule. It is unique for the same property.

388 Example: C:600:ALL:IdentifiedObject.name:stringLength

### 389 2.3 Profile constraints

390 This clause defines requirements and constraints that shall be fulfilled by applications that  
391 conform to this document.

392 This document is the master for rules and constraints tagged "NC". For the sake of self-  
393 containment, the list below also includes a copy of the relevant rules from IEC 61970-452,  
394 tagged "452".

- 395 • C:452:ALL:NA:datatypes

396 According to 61970-501, datatypes are not exchanged in the instance data. The  
397 UnitMultiplier is 1 in cases none value is specified in the profile.

- 398 • R:452:ALL:NA:exchange

399 Optional and required attributes and associations must be imported and exported if they  
400 are in the model file prior to import.

- 401 • R:452:ALL:NA:exchange1

402 If an optional attribute does not exist in the imported file, it does not have to be exported  
403 in case exactly the same data set is exported, i.e. the tool is not obliged to automatically  
404 provide this attribute. If the export is resulting from an action by the user performed after  
405 the import, e.g. data processing or model update the export can contain optional  
406 attributes.

- 407 • R:452:ALL:NA:exchange2

408 In most of the profiles the selection of optional and required attributes is made so as to  
409 ensure a minimum set of required attributes without which the exchange does not fulfil  
410 its basic purpose. Business processes governing different exchanges can require  
411 mandatory exchange of certain optional attributes or associations. Optional and required  
412 attributes and associations shall therefore be supported by applications which claim  
413 conformance with certain functionalities of the IEC 61970-452. This provides flexibility  
414 for the business processes to adapt to different business requirements and base the  
415 exchanges on IEC 61970-452 compliant applications.

- 416 • R:452:ALL:NA:exchange3

- 417 An exporter may, at his or her discretion, produce a serialization containing additional  
418 class data described by the CIM Schema but not required by this document provided  
419 these data adhere to the conventions established in Clause 5.
- 420 • R:452:ALL:NA:exchange4
- 421 From the standpoint of the model import used by a data recipient, the document  
422 describes a subset of the CIM that importing software shall be able to interpret in order  
423 to import exported models. Data providers are free to exceed the minimum requirements  
424 described herein as long as their resulting data files are compliant with the CIM Schema  
425 and the conventions established in Clause 5. The document, therefore, describes  
426 additional classes and class data that, although not required, exporters will, in all  
427 likelihood, choose to include in their data files. The additional classes and data are  
428 labelled as required (cardinality 1..1) or as optional (cardinality 0..1) to distinguish them  
429 from their required counterparts. Please note, however, that data importers could  
430 potentially receive data containing instances of any and all classes described by the  
431 CIM Schema.
- 432 • R:452:ALL:NA:cardinality
- 433 The cardinality defined in the CIM model shall be followed, unless a more restrictive  
434 cardinality is explicitly defined in this document. For instance, the cardinality on the  
435 association between VoltageLevel and BaseVoltage indicates that a VoltageLevel shall  
436 be associated with one and only one BaseVoltage, but a BaseVoltage can be associated  
437 with zero to many VoltageLevels.
- 438 • R:452:ALL:NA:associations
- 439 Associations between classes referenced in this document and classes not referenced  
440 here are not required regardless of cardinality.
- 441 • R:452:ALL:IdentifiedObject.name:rule
- 442 The attribute “name” inherited by many classes from the abstract class IdentifiedObject  
443 is not required to be unique. It must be a human readable identifier without additional  
444 embedded information that would need to be parsed. The attribute is used for purposes  
445 such as User Interface and data exchange debugging. The MRID defined in the data  
446 exchange format is the only unique and persistent identifier used for this data exchange.  
447 The attribute IdentifiedObject.name is, however, always required for CoreEquipment  
448 profile and Short Circuit profile.
- 449 • R:452:ALL:IdentifiedObject.description:rule
- 450 The attribute “description” inherited by many classes from the abstract class  
451 IdentifiedObject must contain human readable text without additional embedded  
452 information that would need to be parsed.
- 453 • R:452:ALL:NA:uniqueIdentifier
- 454 All IdentifiedObject-s shall have a persistent and globally unique identifier (Master  
455 Resource Identifier - mRID).
- 456 • R:452:ALL:NA:unitMultiplier
- 457 For exchange of attributes defined using CIM Data Types (ActivePower, Susceptance,  
458 etc.) a unit multiplier of 1 is used if the UnitMultiplier specified in this document is “none”.
- 459 • C:452:ALL:IdentifiedObject.name:stringLength

460 The string IdentifiedObject.name has a maximum of 128 characters.

- 461 • C:452:ALL:IdentifiedObject.description:stringLength

462 The string IdentifiedObject.description is maximum 256 characters.

- 463 • C:452:ALL:NA:float

464 An attribute that is defined as float (e.g. has a type Float or a type which is a Datatype  
465 with .value attribute of type Float) shall support ISO/IEC 60559:2020 for floating-point  
466 arithmetic using single precision floating point. A single precision float supports 7  
467 significant digits where the significant digits are described as an integer, or a decimal  
468 number with 6 decimal digits. Two float values are equal when the significant with 7  
469 digits are identical, e.g. 1234567 is equal 1.234567E6 and so are 1.2345678 and  
470 1.234567E0.

- 471 • R:NC:ALL:Region:reference

472 The reference to the Region is normally a reference to the capacity calculation region,  
473 which is identified by “Y” EIC code of the capacity calculation region.

- 474 • R:NC:ALL:SystemOperator:reference

475 The reference to the System Operator is normally identified by “X” EIC code of TSO.

## 476 2.4 Metadata

477 ENTSO-E agreed to extend the header and metadata definitions by IEC 61970-552 Ed2. This  
478 new header definitions rely on W3C recommendations which are used worldwide and are  
479 positively recognised by the European Commission. The new definitions of the header mainly  
480 use Provenance ontology (PROV-O), Time Ontology and Data Catalog Vocabulary (DCAT). The  
481 global new header applicable for this profile is included in the metadata and document header  
482 specification document.

483 The header vocabulary contains all attributes defined in IEC 61970-552. This is done only for  
484 the purpose of having one vocabulary for header and to ensure transition for data exchanges  
485 that are using IEC 61970-552:2016 header. This profile does not use IEC 61970-552:2016  
486 header attributes and relies only on the extended attributes.

### 487 2.4.1 Constraints

488 The identification of the constraints related to the metadata follows the same convention for  
489 naming of the constraints as for profile constraints.

- 490 • R:NC:ALL:wasAttributedTo:usage

491 The prov:wasAttributedTo should normally be the “X” EIC code of the actor (prov:Agent).

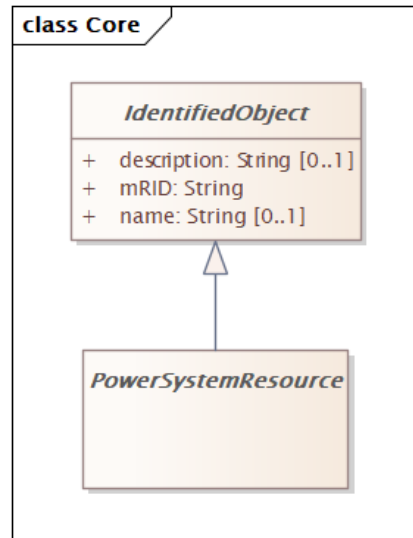

492

### 493 2.4.2 Reference metadata

494 The header defined for this profile requires availability of a set of reference metadata. For  
495 instance, the attribute prov:wasGeneratedBy requires a reference to an activity which produced  
496 the model or the related process. The activities are defined as reference metadata and their  
497 identifiers are referenced from the header to enable the receiving entity to retrieve the “static”  
498 (reference) information that is not modified frequently. This approach imposes a requirement  
499 that both the sending entity and the receiving entity have access to a unique version of the  
500 reference metadata. Therefore, each business process shall define which reference metadata  
501 is used and where it is located.

### 3.10 (NC) CountertradeRemedialAction

Inheritance path = [PowerRemedialAction](#) : [RemedialAction](#) : [IdentifiedObject](#)

Countertrade is a remedial action to relieve physical congestions where the location of activated resources within the bidding zone is not known.

Table 10 shows all attributes of CountertradeRemedialAction.

**Table 10 – Attributes of RemedialActionProfile::CountertradeRemedialAction**

name	mult	type	description
gLSKStrategy	1..1	<a href="#">GLSKStrategyKind</a>	(NC) Generating and load shift keys strategy gives instruction on how the value (Active power) is going to be distributed inside the relevant bidding zone.
shiftMethod	1..1	<a href="#">ShiftMethodKind</a>	(NC) Shift method used for the countertrade action.
maxEconomicP	0..1	<a href="#">ActivePower</a>	(NC) Maximum high economic active power limit, that should not exceed the maximum operating active power limit.
minEconomicP	0..1	<a href="#">ActivePower</a>	(NC) Low economic active power limit that shall be greater than or equal to the minimum operating active power limit.
kind	1..1	<a href="#">RemedialActionKind</a>	(NC) inherited from: <a href="#">RemedialAction</a>
penaltyFactor	0..1	<a href="#">Float</a>	(NC) inherited from: <a href="#">RemedialAction</a>

597

598 **3.11 (abstract) Contingency root class**

599 An event threatening system reliability, consisting of one or more contingency elements.

600 **3.12 (NC) ContingencyWithRemedialAction root class**601 Combination of a contingency and a remedial action. ContingencyWithRemedialAction shall not  
602 be instantiated for preventive RemedialAction (RemedialAction.kind equals  
603 RemedialActionKind.preventive).

604 Table 12 shows all attributes of ContingencyWithRemedialAction.

605 **Table 12 – Attributes of RemedialActionProfile::ContingencyWithRemedialAction**

name	mult	type	description
mRID	1..1	<a href="#">String</a>	(NC) Master resource identifier issued by a model authority. The mRID is unique within an exchange context. Global uniqueness is easily achieved by using a UUID, as specified in RFC 4122, for the mRID. The use of UUID is strongly recommended.  For CIMXML data files in RDF syntax conforming to IEC 61970-552, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements.
combinationConstraintKind	1..1	<a href="#">ElementCombinationConstraintKind</a>	(NC) Defines the combination constraint of the Contingency and Remedial Action. If included, this remedial action can only be applied for this contingency. Else if excluded, this remedial action should not be used for this contingency. Else if considered, this remedial action can be considered for this contingency.
normalEnabled	0..1	<a href="#">Boolean</a>	(NC) If true, the contingency with remedial action is enabled, otherwise it is disabled under normal operating conditions.

606

607 Table 13 shows all association ends of ContingencyWithRemedialAction with other classes.

608 **Table 13 – Association ends of RemedialActionProfile::ContingencyWithRemedialAction**  
609 **with other classes**

704

**705 3.29 (Description) GeneratingUnit root class**706 A single or set of synchronous machines for converting mechanical power into alternating-  
707 current power. For example, individual machines within a set may be defined for scheduling  
708 purposes while a single control signal is derived for the set. In this case there would be a

709 GeneratingUnit for each member of the set and an additional GeneratingUnit corresponding to  
710 the set.

### 711 3.30 (abstract,NC) GridStateAlteration

712 Inheritance path = [IdentifiedObject](#)

713 Grid state alteration is a change of values describing state (operating point) of one element in  
714 the grid model compared to the base case.

715 Table 28 shows all attributes of GridStateAlteration.

716 **Table 28 – Attributes of RemedialActionProfile::GridStateAlteration**

name	mult	type	description
normalEnabled	0..1	<a href="#">Boolean</a>	(NC) The default/normal value used when other active signal/values are missing.
maximumPerDay	0..1	<a href="#">Integer</a>	(NC) Maximum number of alterations per day.
minimumActivation	0..1	<a href="#">Duration</a>	(NC) Minimum time duration between activating the same grid state alteration.
timePerStage	0..1	<a href="#">Duration</a>	(NC) Time to implement a stage of a grid state alteration. If a grid state alteration consists of multiple stages (e.g. A step on a power transformer), this duration comes in addition to the timeToImplement and need to be multiplied by the number of stages. A stage can also be defined as MW in the case of regulating production.

738

739 **3.33 (abstract) IdentifiedObject root class**740 This is a root class to provide common identification for all classes needing identification and  
741 naming attributes.

742 Table 33 shows all attributes of IdentifiedObject.

743 **Table 33 – Attributes of RemedialActionProfile::IdentifiedObject**

name	mult	type	description
description	0..1	<a href="#">String</a>	The description is a free human readable text describing or naming the object. It may be non unique and may not correlate to a naming hierarchy.
mRID	1..1	<a href="#">String</a>	Master resource identifier issued by a model authority. The mRID is unique within an exchange context. Global uniqueness is easily achieved by using a UUID, as specified in RFC 4122, for the mRID. The use of UUID is strongly recommended.  For CIMXML data files in RDF syntax conforming to IEC 61970-552, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements.

name	mult	type	description
name	0..1	<a href="#">String</a>	The name is any free human readable and possibly non unique text naming the object.

744

### 745 3.34 (NC) IntertemporalPropertyRange

746 Inheritance path = [RangeConstraint](#) : [IdentifiedObject](#)

747 It represents the intertemporal range, which means that this is the maximum change of an  
748 attribute value between two time stamps or per time unit (e.g. hour). Both up and down  
749 directions are defined by the direction attribute, i.e. There are different schedules per direction.  
750 The class is not instantiated for PropertyReference which refers to Boolean type attributes.

751 For instance the following example illustrates the approach:

752 - A tap changer related grid state alteration having two intertemporal range schedules.  
753 - For a particular point in time, the value from up schedule is 6 and the value from down  
754 schedule is 3.

755 - Then, the GridStateIntensity for the same point in time cannot be more than plus 6 taps from  
756 the current, or more than minus 3 taps from the current.

757 Table 34 shows all attributes of IntertemporalPropertyRange.

774

775 **3.37 (abstract) Measurement root class**

776 A Measurement represents any measured, calculated or non-measured non-calculated  
777 quantity. Any piece of equipment may contain Measurements, e.g. a substation may have  
778 temperature measurements and door open indications, a transformer may have oil temperature  
779 and tank pressure measurements, a bay may contain a number of power flow measurements  
780 and a Breaker may contain a switch status measurement.

781 The PSR - Measurement association is intended to capture this use of Measurement and is  
782 included in the naming hierarchy based on EquipmentContainer. The naming hierarchy typically  
783 has Measurements as leaves, e.g. Substation-VoltageLevel-Bay-Switch-Measurement.

784 Some Measurements represent quantities related to a particular sensor location in the network,  
785 e.g. a voltage transformer (VT) or potential transformer (PT) at a busbar or a current transformer  
786 (CT) at the bar between a breaker and an isolator. The sensing position is not captured in the  
787 PSR - Measurement association. Instead it is captured by the Measurement - Terminal  
788 association that is used to define the sensing location in the network topology. The location is  
789 defined by the connection of the Terminal to ConductingEquipment.

790 If both a Terminal and PSR are associated, and the PSR is of type ConductingEquipment, the  
791 associated Terminal should belong to that ConductingEquipment instance.

792 When the sensor location is needed both Measurement-PSR and Measurement-Terminal are  
793 used. The Measurement-Terminal association is never used alone.

794 **3.38 (NC) MeasurementCalculator**

795 Inheritance path = [IdentifiedObject](#)

796 Result of a calculation of one or more measurement.

797 Table 38 shows all attributes of MeasurementCalculator.

899

900

### 3.49 (abstract) PowerElectronicsConnection root class

901

A connection to the AC network for energy production or consumption that uses power electronics rather than rotating machines.

902

903

### 3.50 (NC) PowerElectronicsConnectionAction

904

Inheritance path = [SetPointAction](#) : [GridStateAlteration](#) : [IdentifiedObject](#)

905

Power electronics setpoint action.

906

Table 59 shows all attributes of PowerElectronicsConnectionAction.

907

**Table 59 – Attributes of RemedialActionProfile::PowerElectronicsConnectionAction**

name	mult	type	description
normalEnabled	0..1	<a href="#">Boolean</a>	(NC) inherited from: <a href="#">GridStateAlteration</a>

0..*	RemedialActionSystemOperator	0..1	<a href="#">SystemOperator</a>	(NC) inherited from: <a href="#">RemedialAction</a>

922

923 **3.52 (abstract) PowerSystemResource**924 Inheritance path = [IdentifiedObject](#)

925 A power system resource (PSR) can be an item of equipment such as a switch, an equipment container containing many individual items of equipment such as a substation, or an organisational entity such as sub-control area. Power system resources can have measurements associated.

929 Table 63 shows all attributes of PowerSystemResource.

930 **Table 63 – Attributes of RemedialActionProfile::PowerSystemResource**

name	mult	type	description
description	0..1	<a href="#">String</a>	inherited from: <a href="#">IdentifiedObject</a>
mRID	1..1	<a href="#">String</a>	inherited from: <a href="#">IdentifiedObject</a>
name	0..1	<a href="#">String</a>	inherited from: <a href="#">IdentifiedObject</a>

931

932 **3.53 (abstract,NC) PowerTransferCorridor root class**

933 A power transfer corridor is defined as a set of circuits (transmission lines or transformers)  
934 separating two portions of the power system, or a subset of circuits exposed to a substantial  
935 portion of the transmission exchange between two parts of the system.

936 Table 64 shows all association ends of PowerTransferCorridor with other classes.

937 **Table 64 – Association ends of RemedialActionProfile::PowerTransferCorridor with**  
938 **other classes**

mult from	name	mult to	type	description
0..*	ObservingTerminal	0..1	<a href="#">Terminal</a>	(NC) The terminal that identifies the power transfer corridor.

939

940 **3.54 (abstract,NC) PropertyReference root class**

941 The reference to a class and one of its properties.

942 **3.55 (NC) PTCActivePowerSupport root class**

943 Defines the active power capability (support) of the scheme in relation to a  
944 PowerTransferCorridor.

945 Table 65 shows all attributes of PTCActivePowerSupport.

946 **Table 65 – Attributes of RemedialActionProfile::PTCActivePowerSupport**

name	mult	type	description
maximum	1..1	<a href="#">ActivePower</a>	(NC) Maximum support that a System Integrity Protection Scheme (SIPS) can provide to a Power Transfer Corridor (PTC). This is normally limited by the maximum power system disconnect allowed.
normal	1..1	<a href="#">ActivePower</a>	(NC) Normal support that a System Integrity Protection Scheme (SIPS) is expected to provide when enabled to a Power Transfer Corridor (PTC).

947

948 Table 66 shows all association ends of PTCActivePowerSupport with other classes.

949 **Table 66 – Association ends of RemedialActionProfile::PTCActivePowerSupport with**  
950 **other classes**

mult from	name	mult to	type	description
0..*	PowerTransferCorridor	1..1	<a href="#">PowerTransferCorridor</a>	(NC) The PowerTransferCorridor that has a specific active power support.
0..*	RemedialActionScheme	1..1	<a href="#">RemedialActionScheme</a>	(NC) The RemedialActionScheme which has active power support from the PowerTransferCorridor.

951

952 **3.56 (abstract,NC) RangeConstraint**

953 Inheritance path = [IdentifiedObject](#)

954 Defines the range constraint.

955 Table 67 shows all attributes of RangeConstraint.

956

**Table 67 – Attributes of RemedialActionProfile::RangeConstraint**

name	mult	type	description
direction	1..1	<a href="#">RelativeDirectionKind</a>	(NC) Defines the direction of the attribute value referenced by the PropertyReference.
valueKind	0..1	<a href="#">ValueOffsetKind</a>	(NC) Kind of value offset for the range that applies to the attribute referenced by the PropertyReference.
normalValue	0..1	<a href="#">Float</a>	(NC) The normal (initial) value. The meaning of the value is defined by the attribute referenced by the PropertyReference. The value can be integer, float or boolean. In case of boolean 1 equals true and 0 equals false.  If the valueKind is incremental or incrementalPercentage, then the value shall be positive (greater than zero).  If the valueKind is incrementalPercentage, then the value shall be in the range [0, 100].

972

### 973 3.58 (abstract,NC) Region root class

974 A region where the system operator belongs to.

### 975 3.59 (abstract) RegulatingControl root class

976 Specifies a set of equipment that works together to control a power system quantity such as  
977 voltage or flow.

978 Remote bus voltage control is possible by specifying the controlled terminal located at some  
979 place remote from the controlling equipment.

980 The specified terminal shall be associated with the connectivity node of the controlled point.

981 The most specific subtype of RegulatingControl shall be used in case such equipment  
982 participate in the control, e.g. TapChangerControl for tap changers.

983 For flow control, load sign convention is used, i.e. positive sign means flow out from a  
984 TopologicalNode (bus) into the conducting equipment.

985 The attribute minAllowedTargetValue and maxAllowedTargetValue are required in the following  
986 cases:

987 - For a power generating module operated in power factor control mode to specify maximum  
988 and minimum power factor values;

989 - Whenever it is necessary to have an off center target voltage for the tap changer regulator.

990 For instance, due to long cables to off shore wind farms and the need to have a simpler setup  
991 at the off shore transformer platform, the voltage is controlled from the land at the connection

992 point for the off shore wind farm. Since there usually is a voltage rise along the cable, there is  
993 typical and overvoltage of up 3-4 kV compared to the on shore station. Thus in normal operation

994 the tap changer on the on shore station is operated with a target set point, which is in the lower  
995 parts of the dead band.

996 The attributes minAllowedTargetValue and maxAllowedTargetValue are not related to the  
997 attribute targetDeadband and thus they are not treated as an alternative of the targetDeadband.

998 They are needed due to limitations in the local substation controller. The attribute  
999 targetDeadband is used to prevent the power flow from move the tap position in circles (hunting)

1000 that is to be used regardless of the attributes minAllowedTargetValue and  
1001 maxAllowedTargetValue.

### 1002 3.60 (NC) RegulatingControlAction

1003 Inheritance path = [GridStateAlteration](#) : [IdentifiedObject](#)

1004 Control action means the set point change of a regulating control power system resource in the  
1005 grid model compared to the base case.

### 3.61 (abstract,NC) RemedialAction

Inheritance path = [IdentifiedObject](#)

Remedial action describes one or more actions that can be performed on a given power system model situation to eliminate one or more identified breaches of constraints. The remedial action can be costly, and have a cost characteristic, or non costly.

Table 73 shows all attributes of RemedialAction.

**Table 73 – Attributes of RemedialActionProfile::RemedialAction**

name	mult	type	description
kind	1..1	<a href="#">RemedialActionKind</a>	(NC) The kind of the remedial action. If curative remedial action, it is required to have an association with ContingencyWithRemedialAction. If preventive remedial action, RemedialAction class shall not have association with ContingencyWithRemedialAction.
penaltyFactor	0..1	<a href="#">Float</a>	(NC) Defines the relative penalty for a given remedial action. This is a positive number greater than zero and default is one, meaning the remedial action does not have negative nor positive effect on the quality of the solution. A remedial action that provide changes in the transmission loss can have negative (Between zero and one) or positive effect (Bigger than one) given by $1 / (1 - \text{Incremental Transmission Loss})$ . In a similar way remedial action using generating units or compensation units can have negative or positive effect. Typical value would be between 0.8 and 1.1.
isCrossBorderRelevant	1..1	<a href="#">Boolean</a>	(NC) Indicates if the remedial action is cross border relevant. True, means that the remedial action is cross border relevant.
isManual	0..1	<a href="#">Boolean</a>	(NC) Indicates if the remedial action is manually executed which involves one or many actions performed by human. A SIPS remedial action cannot be manual. True, means that the remedial action is manual. False, means that the

name	mult	type	description
			remedial action is automatically executed without human communication.
timeToImplement	0..1	<a href="#">Duration</a>	(NC) Time to implement a remedial action.
impactThresholdMargin	0..1	<a href="#">PerCent</a>	(NC) Impact threshold margin for the use of the remedial action. Meaning that the remedial action should not be used if it cannot resolve violation with more than the given impact threshold margin. The allowed value range is [0,100].
normalAvailable	1..1	<a href="#">Boolean</a>	(NC) It identifies if the remedial action is available under normal condition. True means available, False means unavailable.
description	0..1	<a href="#">String</a>	inherited from: <a href="#">IdentifiedObject</a>

0..*	RemedialActionSystemOperator	0..1	<a href="#">SystemOperator</a>	(NC) System operator operating remedial actions.

1024

### 1025 3.62 (NC) RemedialActionDependency root class

1026 Remedial action dependency is making two remedial actions depending on each other. Multiple  
1027 dependency is done by multiple instances of this class. The dependency can arrive by having  
1028 one of the following examples.

1029 - The dependent remedial action is controlled by different system operator (Modeling Authority)  
1030 (e.g. SIPS that goes across control area).

1031 - The dependent remedial action is representing two or more remedial action that represent  
1032 the same grid state alteration but with different modeling resolution (e.g. detail direct current  
1033 model versus a simplified model).

1034 - The remedial action can be combined with other remedial action without the need to create  
1035 multiple remedial action with the same grid alteration for enabling dependency.

1036 Table 75 shows all attributes of RemedialActionDependency.

1037

**Table 75 – Attributes of RemedialActionProfile::RemedialActionDependency**

name	mult	type	description
kind	1..1	<a href="#">RemedialActionDependencyKind</a>	(NC) Type of dependency between two remedial actions.
mRID	1..1	<a href="#">String</a>	(NC) Master resource identifier issued by a model authority. The mRID is unique within an exchange context. Global uniqueness is easily achieved by using a UUID, as specified in RFC 4122, for the mRID. The use of UUID is strongly recommended.  For CIMXML data files in RDF syntax conforming to IEC 61970-552, the mRID is mapped to rdf:ID or rdf:about attributes that identify CIM object elements.

name	mult	type	description
normalEnabled	0..1	<a href="#">Boolean</a>	(NC) If true, the remedial action dependency with contingency shall be considered under normal operating conditions.

1073

### 1074 3.67 (NC) SchemeRemedialAction

1075 Inheritance path = [RemedialAction](#) : [IdentifiedObject](#)

1076 Scheme remedial action is remedial action that involves a scheme that can include conditional  
1077 logic and stages of grid alteration. The primary remedial action is the arming of these schemes,  
1078 that will then perform curative remedial action when the condition is met. System Integrity  
1079 Protection Scheme (SIPS) and Special Protection Scheme (SPS) are example of this.

1080 Table 82 shows all attributes of SchemeRemedialAction.

1081 **Table 82 – Attributes of RemedialActionProfile::SchemeRemedialAction**

1133

1134 **3.74 (NC) StaticPropertyRange**1135 Inheritance path = [RangeConstraint](#) : [IdentifiedObject](#)1136 Defines the static range, which means that this is the minimum and/or maximum of an attribute  
1137 value. The value provided by the schedule replaces the value of the attribute to which the  
1138 schedule refers to.1139 In case that the PropertyReference refers to Boolean type attributes, RangeConstraint.direction  
1140 shall be none or upAndDown and the RangeConstraint.valueKind shall be absolute. If the  
1141 direction is none then optimization of the attribute referenced by the PropertyReference is not  
1142 possible if the current status is already as the value in the range. Otherwise if the direction is  
1143 upAndDown, the optimization can change from true to false or vice versa independently of the  
1144 initial value in the operational scenario.1145 For instance for a tap changer related grid state alteration for a particular point in time, if the  
1146 range of TapChanger.step is to be restricted, the value of the schedule will represent that new  
1147 TapChanger.step range.

1148 Table 92 shows all attributes of StaticPropertyRange.

1149 **Table 92 – Attributes of RemedialActionProfile::StaticPropertyRange**

1154

1155 **3.75 (abstract) StaticVarCompensator root class**1156 A facility for providing variable and controllable shunt reactive power. The SVC typically  
1157 consists of a stepdown transformer, filter, thyristor-controlled reactor, and thyristor-switched  
1158 capacitor arms.1159 The SVC may operate in fixed MVar output mode or in voltage control mode. When in voltage  
1160 control mode, the output of the SVC will be proportional to the deviation of voltage at the  
1161 controlled bus from the voltage setpoint. The SVC characteristic slope defines the proportion.  
1162 If the voltage at the controlled bus is equal to the voltage setpoint, the SVC MVar output is zero.1163 **3.76 (NC) StaticVarCompensatorAction**1164 Inheritance path = [SetPointAction](#) : [GridStateAlteration](#) : [IdentifiedObject](#)

1165 Static Var compensator action.

1172

1173 **3.77 (Description) Substation root class**1174 A collection of equipment for purposes other than generation or utilization, through which  
1175 electric energy in bulk is passed for the purposes of switching or modifying its characteristics.1176 **3.78 (abstract) Switch root class**1177 A generic device designed to close, or open, or both, one or more electric circuits. All switches  
1178 are two terminal devices including grounding switches. The ACDCTerminal.connected at the  
1179 two sides of the switch shall not be considered for assessing switch connectivity, i.e. only  
1180 Switch.open, .normalOpen and .locked are relevant.1181 **3.79 (abstract,NC) SystemOperator root class**

1182 System operator.

1183 **3.80 (abstract) TapChanger root class**

1184 Mechanism for changing transformer winding tap positions.

1185 **3.81 (NC) TapPositionAction**1186 Inheritance path = [GridStateAlteration](#) : [IdentifiedObject](#)1187 Tap position action represents a change of a tap changer position in the grid model compared  
1188 to the base case.

1189 Table 96 shows all attributes of TapPositionAction.

1190 **Table 96 – Attributes of RemedialActionProfile::TapPositionAction**

1195

1196

### 3.82 (abstract) Terminal root class

1197

An AC electrical connection point to a piece of conducting equipment. Terminals are connected at physical connection points called connectivity nodes.

1198

1199

### 3.83 (NC) TopologyAction

1200

Inheritance path = [GridStateAlteration](#) : [IdentifiedObject](#)

1201

Topology action means the connection or disconnection of a switch in the grid model compared to the base case.

1202

1203

Table 98 shows all attributes of TopologyAction.

1204

**Table 98 – Attributes of RemedialActionProfile::TopologyAction**

name	mult	type	description

0..*	RemedialActionScheme	1..1	<a href="#">RemedialActionScheme</a>	(NC) The remedial action scheme that has the trigger condition.

1219

**3.85 (NC) CalculationKind enumeration**

1221 Kind of calculation operation that can be done to Measurement.

1222 Table 102 shows all literals of CalculationKind.

1223

**Table 102 – Literals of RemedialActionProfile::CalculationKind**

literal	value	description
summation		Summation operation on the input values (operands).
multiplication		Multiplication operation on the input values (operands).
division		Division operation on the input values (operands).
squareRoot		Square root operator - only one input value (operands).

1224

**3.86 Currency enumeration**

1226 Monetary currencies. ISO 4217 standard including 3-character currency code.

1227 Table 103 shows all literals of Currency.

1228

**Table 103 – Literals of RemedialActionProfile::Currency**

literal	value	description
AED	784	United Arab Emirates dirham.
AFN	971	Afghan afghani.
ALL	008	Albanian lek.
AMD	051	Armenian dram.
ANG	532	Netherlands Antillean guilder.
AOA	973	Angolan kwanza.
ARS	032	Argentine peso.
AUD	036	Australian dollar.
AWG	533	Aruban florin.
AZN	944	Azerbaijani manat.
BAM	977	Bosnia and Herzegovina convertible mark.
BBD	052	Barbados dollar.
BDT	050	Bangladeshi taka.
BGN	975	Bulgarian lev.
BHD	048	Bahraini dinar.
BIF	108	Burundian franc.
BMD	060	Bermudian dollar (customarily known as Bermuda dollar).
BND	096	Brunei dollar.
BOB	068	Boliviano.
BOV	984	Bolivian Mvdol (funds code).
BRL	986	Brazilian real.
BSD	044	Bahamian dollar.
BTN	064	Bhutanese ngultrum.
BWP	072	Botswana pula.
BYR	974	Belarusian ruble.
BZD	084	Belize dollar.
CAD	124	Canadian dollar.
CDF	976	Congolese franc.
CHF	756	Swiss franc.
CLF	990	Unidad de Fomento (funds code), Chile.
CLP	152	Chilean peso.
CNY	156	Chinese yuan.
COP	170	Colombian peso.
COU	970	Unidad de Valor Real.
CRC	188	Costa Rican colon.
CUC	931	Cuban convertible peso.
CUP	192	Cuban peso.
CVE	132	Cape Verde escudo.
CZK	203	Czech koruna.

literal	value	description
DJF	262	Djiboutian franc.
DKK	208	Danish krone.
DOP	214	Dominican peso.
DZD	012	Algerian dinar.
EEK	233	Estonian kroon.
EGP	818	Egyptian pound.
ERN	232	Eritrean nakfa.
ETB	230	Ethiopian birr.
EUR	978	Euro.
FJD	242	Fiji dollar.
FKP	238	Falkland Islands pound.
GBP	826	Pound sterling.
GEL	981	Georgian lari.
GHS	936	Ghanaian cedi.
GIP	929	Gibraltar pound.
GMD	270	Gambian dalasi.
GNF	324	Guinean franc.
GTQ	320	Guatemalan quetzal.
GYD	328	Guyanese dollar.
HKD	344	Hong Kong dollar.
HNL	340	Honduran lempira.
HRK	191	Croatian kuna.
HTG	332	Haitian gourde.
HUF	348	Hungarian forint.
IDR	360	Indonesian rupiah.
ILS	376	Israeli new sheqel.
INR	356	Indian rupee.
IQD	368	Iraqi dinar.
IRR	364	Iranian rial.
ISK	352	Icelandic króna.
JMD	388	Jamaican dollar.
JOD	400	Jordanian dinar.
JPY	392	Japanese yen.
KES	404	Kenyan shilling.
KGS	417	Kyrgyzstani som.
KHR	116	Cambodian riel.
KMF	174	Comoro franc.
KPW	408	North Korean won.
KRW	410	South Korean won.
KWD	414	Kuwaiti dinar.
KYD	136	Cayman Islands dollar.

literal	value	description
KZT	398	Kazakhstani tenge.
LAK	418	Lao kip.
LBP	422	Lebanese pound.
LKR	144	Sri Lanka rupee.
LRD	430	Liberian dollar.
LSL	426	Lesotho loti.
LTL	440	Lithuanian litas.
LVL	428	Latvian lats.
LYD	434	Libyan dinar.
MAD	504	Moroccan dirham.
MDL	498	Moldovan leu.
MGA	969	Malagasy ariary.
MKD	807	Macedonian denar.
MMK	104	Myanma kyat.
MNT	496	Mongolian tugrik.
MOP	446	Macanese pataca.
MRO	478	Mauritanian ouguiya.
MUR	480	Mauritian rupee.
MVR	462	Maldivian rufiyaa.
MWK	454	Malawian kwacha.
MXN	484	Mexican peso.
MYR	458	Malaysian ringgit.
MZN	943	Mozambican metical.
NAD	516	Namibian dollar.
NGN	566	Nigerian naira.
NIO	558	Cordoba oro.
NOK	578	Norwegian krone.
NPR	524	Nepalese rupee.
NZD	554	New Zealand dollar.
OMR	512	Omani rial.
PAB	590	Panamanian balboa.
PEN	604	Peruvian nuevo sol.
PGK	598	Papua New Guinean kina.
PHP	608	Philippine peso.
PKR	586	Pakistani rupee.
PLN	985	Polish zloty.
PYG	600	Paraguayan guaraní.
QAR	634	Qatari rial.
RON	946	Romanian new leu.
RSD	941	Serbian dinar.
RUB	643	Russian rouble.

literal	value	description
RWF	646	Rwandan franc.
SAR	682	Saudi riyal.
SBD	090	Solomon Islands dollar.
SCR	690	Seychelles rupee.
SDG	938	Sudanese pound.
SEK	752	Swedish krona/kronor.
SGD	702	Singapore dollar.
SHP	654	Saint Helena pound.
SLL	694	Sierra Leonean leone.
SOS	706	Somali shilling.
SRD	968	Surinamese dollar.
STD	678	São Tomé and Príncipe dobra.
SYP	760	Syrian pound.
SZL	748	Lilangeni.
THB	764	Thai baht.
TJS	972	Tajikistani somoni.
TMT	934	Turkmenistani manat.
TND	788	Tunisian dinar.
TOP	776	Tongan pa'anga.
TRY	949	Turkish lira.
TTD	780	Trinidad and Tobago dollar.
TWD	901	New Taiwan dollar.
TZS	834	Tanzanian shilling.
UAH	980	Ukrainian hryvnia.
UGX	800	Ugandan shilling.
USD	840	United States dollar.
UYU	858	Uruguayan peso.
UZS	860	Uzbekistan som.
VEF	937	Venezuelan bolívar fuerte.
VND	704	Vietnamese Dong.
VUV	548	Vanuatu vatu.
WST	882	Samoan tala.
XAF	950	CFA franc BEAC.
XCD	951	East Caribbean dollar.
XOF	952	CFA Franc BCEAO.
XPF	953	CFP franc.
YER	886	Yemeni rial.
ZAR	710	South African rand.
ZMK	894	Zambian kwacha.
ZWL	932	Zimbabwe dollar.

1230 **3.87 (NC) DependencyKind enumeration**

1231 Kind of dependency between remedial actions.

1232 Table 104 shows all literals of DependencyKind.

1233

**Table 104 – Literals of RemedialActionProfile::DependencyKind**

literal	value	description
exclusive		Remedial actions are exclusive depending on each other. e.g. Only one of the remedial actions can be selected at the same time.
inclusive		Remedial actions are inclusive depending on each other. e.g. Both remedial action need to be picked if one of them is needed.
restrictive		Remedial actions are restrictive depending on each other. The need to include or to exclude might depend on the model. e.g. In the case of simplified DC model and detailed DC model. In the case where the simplified remedial action is used but not the remedial action for the detail model and opposite for the DC model.
none		Remedial actions are not depending on each other. However, the two remedial actions should be evaluated together.

1234

1235 **3.88 (NC) ElementCombinationConstraintKind enumeration**

1236 Kind of constraint for an element combination.

1237 Table 105 shows all literals of ElementCombinationConstraintKind.

1238

**Table 105 – Literals of RemedialActionProfile::ElementCombinationConstraintKind**

literal	value	description
included		Element combination is included.
excluded		Element combination is excluded.
considered		Element combination can be considered.

1239

1240 **3.89 (NC) GateLogicKind enumeration**

1241 Define the different logical operations.

1242 Table 106 shows all literals of GateLogicKind.

1243

**Table 106 – Literals of RemedialActionProfile::GateLogicKind**

literal	value	description
and		A logical AND operation. True when all inputs are true.
or		A logical OR operation. True when one or more inputs are true.
nor		A logical NOR operation. False when one or more inputs are true.
nand		A logical NAND operation. False when all inputs are true.
not		A logical NOT operation. Only one input and true input will give false out and false in will give true out. An inverter.

literal	value	description
xnor		A logical XNOR operation. The function is the inverse of the exclusive OR (XOR) gate. All input false or true will give true. Otherwise false.
xor		A logical XOR operation. All input false or true will give false. Otherwise true.

1244

### 1245 3.90 (NC) GLSKStrategyKind enumeration

1246 Kind of generating and load shift keys strategy.

1247 Table 107 shows all literals of GLSKStrategyKind.

1248

**Table 107 – Literals of RemedialActionProfile::GLSKStrategyKind**

literal	value	description
explicitInstruction		The distribution is done according to the individual participation factor on the unit.
explicitSchedule		The distribution is explicitly done according to the GLSK Energy Bid Schedule.
generatorFlat		Flat adjustment on all active generators.
loadFlat		Flat adjustment on all active loads.
generatorPmax		The distribution is relative to the maximum p of the generator.
proportionalForGenerator		The distribution is proportional to the generator active power in the given case.
proportionalForLoad		The distribution is proportional to the load active power in the given case.
proportionalForGeneratorAndLoad		The distribution is proportional to the generator and load active power in the given case.
proportionalForRemainingCapacity		The distribution is proportional to the remaining capacity for generators in the given case.

1249

### 1250 3.91 (NC) LogicalOperatorsKind enumeration

1251 Kinds of logical operators for comparison.

1252 Table 108 shows all literals of LogicalOperatorsKind.

1253

**Table 108 – Literals of RemedialActionProfile::LogicalOperatorsKind**

literal	value	description
notEqual		Not equal (unlike) comparison operation.
equals		Equals (like) comparison operation.
lessThanOrEquals		Less than or equals comparison operation.
lessThan		Less than comparison operation.
greaterThanOrEquals		Greater than or equals comparison operation.
greaterThan		Greater than comparison operation.

1254

### 1255 3.92 (NC) PinDCTerminalKind enumeration

1256 The kind of quantities that can serve as an input value for the DCTerminal pin.

1257 Table 109 shows all literals of PinDCTerminalKind.

1258

**Table 109 – Literals of RemedialActionProfile::PinDCTerminalKind**

literal	value	description
voltage		Direct current voltage in the DCTerminal.
current		Direct current in the DCTerminal.

1259

**3.93 (NC) PinPowerTransferCorridorKind enumeration**

1261 The kind of quantities that can serve as an input value for the PowerTransferCorridor pin.

1262 Table 110 shows all literals of PinPowerTransferCorridorKind.

1263

**Table 110 – Literals of RemedialActionProfile::PinPowerTransferCorridorKind**

literal	value	description
activePower		Active power in the branch group.
reactivePower		Reactive power in the branch group.

1264

**3.94 (NC) PinTerminalKind enumeration**

1266 The kind of quantities that can serve as an input value for the pin.

1267 Table 111 shows all literals of PinTerminalKind.

1268

**Table 111 – Literals of RemedialActionProfile::PinTerminalKind**

literal	value	description
activePower		Active power on the Terminal.
apparentPower		Apparent power on the Terminal.
voltageMagnitude		Voltage magnitude on the Terminal.
voltageAngle		Voltage angle on the Terminal.
current		Current on the Terminal.
reactivePower		Reactive power on the Terminal.

1269

**3.95 (NC) PinTerminalLimitKind enumeration**

1271 The kind of limits that can serve as an input value for the pin.

1272 Table 112 shows all literals of PinTerminalLimitKind.

1273

**Table 112 – Literals of RemedialActionProfile::PinTerminalLimitKind**

literal	value	description
voltageLimit		The voltage limit is an input value.
currentLimit		The current limit is an input value.
activePowerLimit		The active power limit is an input value.
voltageAngleLimit		The voltage angle limit is an input value.
apparentPowerLimit		The apparent power limit is an input value.

1274

**3.96 (NC) RelativeDirectionKind enumeration**

1276 Kinds of direction of the manual frequency restoration reserves action.

1277 Table 113 shows all literals of RelativeDirectionKind.

1278

**Table 113 – Literals of RemedialActionProfile::RelativeDirectionKind**

literal	value	description
up		Up signifies that the available power can be used by the purchasing area to increase energy.
down		Down signifies that the available power can be used by the purchasing area to decrease energy.
upAndDown		Up and down signifies that both up and down values are equal.
none		There is no direction.

1279

**1280 3.97 (NC) RemedialActionDependencyKind enumeration**

1281 Kind of dependency between remedial actions.

1282 Table 114 shows all literals of RemedialActionDependencyKind.

1283

**Table 114 – Literals of RemedialActionProfile::RemedialActionDependencyKind**

literal	value	description
exclusive		Remedial actions are exclusive depending on each other. e.g. Only one of the remedial actions can be selected at the same time.
inclusive		Remedial actions are inclusive depending on each other. e.g. Both remedial action need to be picked if one of them is needed.
restrictive		Remedial actions are restrictive depending on each other. The need to include or to exclude might depend on the model. e.g. In the case of simplified DC model and detailed DC model. In the case where the simplified remedial action is used but not the remedial action for the detail model and opposite for the DC model.
none		Remedial actions are not depending on each other. However, the two remedial actions should be evaluated together.

1284

**1285 3.98 (NC) RemedialActionKind enumeration**

1286 The different kinds for a remedial action.

1287 Table 115 shows all literals of RemedialActionKind.

1288

**Table 115 – Literals of RemedialActionProfile::RemedialActionKind**

literal	value	description
curative		Curative remedial action means a remedial action that is the result of an operational planning process and is activated straight subsequent to the occurrence of the respective contingency for compliance with the (N-1) criterion, taking into account transitory admissible overloads and their accepted duration.
preventive		Preventive remedial action means a remedial action that is the result of an operational planning process and needs to be activated prior to the investigated timeframe for compliance with the (N-1) criterion.

1289

1290 **3.99 (NC) RemedialActionSchemeKind enumeration**

1291 Classification of Remedial Action Scheme.

1292 Table 116 shows all literals of RemedialActionSchemeKind.

1293 **Table 116 – Literals of RemedialActionProfile::RemedialActionSchemeKind**

literal	value	description
sips		System Integrity Protection Scheme (SIPS). The triggering conditions are met through field measurements.
rasp		Remedial Action Schema Plan (RASP). The triggering conditions are met through calculation or manual intervention.

1294

1295 **3.100 (NC) ShiftMethodKind enumeration**

1296 Kind of shift method. Describes the way a power schedule should be distributed amongst production and consumption. e.g. Type of generating and load shift key.

1297 Table 117 shows all literals of ShiftMethodKind.

1298 **Table 117 – Literals of RemedialActionProfile::ShiftMethodKind**

literal	value	description
shared		Power schedule shift (distribution) is done by a shared fraction e.g. A two unit with the participation factor 60 and 40 will distribute a 10 MW schedule by 6 and 4 MW.
priority		Power schedule shift (distribution) is done by a shared fraction prioritizing the unit e.g. A two unit with the participation factor 60 and 40 will distribute a 10 MW increased schedule by first filling the highest participation factor (priority) until max economy power or maximum power allowed by the unit before it starts filling the next on the list. e.g. The unit with 60 will be getting its maximum shared first. The same logic applies with reducing the schedule. e.g. The 60 participation factor unit will be reduced to its min economy factor or minimum power.

1300

1301 **3.101 UnitSymbol enumeration**

1302 The derived units defined for usage in the CIM. In some cases, the derived unit is equal to an  
 1303 SI unit. Whenever possible, the standard derived symbol is used instead of the formula for the  
 1304 derived unit. For example, the unit symbol Farad is defined as "F" instead of "CPerV". In cases  
 1305 where a standard symbol does not exist for a derived unit, the formula for the unit is used as  
 1306 the unit symbol. For example, density does not have a standard symbol and so it is represented  
 1307 as "kgPerM3". With the exception of the "kg", which is an SI unit, the unit symbols do not contain  
 1308 multipliers and therefore represent the base derived unit to which a multiplier can be applied as  
 1309 a whole.

1310 Every unit symbol is treated as an unparseable text as if it were a single-letter symbol. The  
 1311 meaning of each unit symbol is defined by the accompanying descriptive text and not by the  
 1312 text contents of the unit symbol.

1313 To allow the widest possible range of serializations without requiring special character handling,  
 1314 several substitutions are made which deviate from the format described in IEC 80000-1. The  
 1315 division symbol "/" is replaced by the letters "Per". Exponents are written in plain text after the  
 1316 unit as "m3" instead of being formatted as "m" with a superscript of 3 or introducing a symbol  
 1317 as in "m^3". The degree symbol "°" is replaced with the letters "deg". Any clarification of the  
 1318 meaning for a substitution is included in the description for the unit symbol.

- 1319 Non-SI units are included in list of unit symbols to allow sources of data to be correctly labelled  
1320 with their non-SI units (for example, a GPS sensor that is reporting numbers that represent feet  
1321 instead of meters). This allows software to use the unit symbol information correctly convert  
1322 and scale the raw data of those sources into SI-based units.  
1323 The integer values are used for harmonization with IEC 61850.  
1324 Table 118 shows all literals of UnitSymbol.

1325 **Table 118 – Literals of RemedialActionProfile::UnitSymbol**

literal	value	description
none	0	Dimension less quantity, e.g. count, per unit, etc.
s	4	Time in seconds.
W	38	Real power in watts (J/s). Electrical power may have real and reactive components. The real portion of electrical power ( $I^2R$ or $VI\cos(\phi)$ ), is expressed in Watts. See also apparent power and reactive power.
VAr	63	Reactive power in volt amperes reactive. The "reactive" or "imaginary" component of electrical power ( $VI\sin(\phi)$ ). (See also real power and apparent power).  Note: Different meter designs use different methods to arrive at their results. Some meters may compute reactive power as an arithmetic value, while others compute the value vectorially. The data consumer should determine the method in use and the suitability of the measurement for the intended purpose.

1326

1327 **3.102 UnitMultiplier enumeration**

- 1328 The unit multipliers defined for the CIM. When applied to unit symbols, the unit symbol is  
1329 treated as a derived unit. Regardless of the contents of the unit symbol text, the unit symbol  
1330 shall be treated as if it were a single-character unit symbol. Unit symbols should not contain  
1331 multipliers, and it should be left to the multiplier to define the multiple for an entire data type.  
1332 For example, if a unit symbol is "m2Pers" and the multiplier is "k", then the value is  $k(m^{**2}/s)$ ,  
1333 and the multiplier applies to the entire final value, not to any individual part of the value. This  
1334 can be conceptualized by substituting a derived unit symbol for the unit type. If one imagines  
1335 that the symbol "P" represents the derived unit "m2Pers", then applying the multiplier "k" can  
1336 be conceptualized simply as "kP".  
1337 For example, the SI unit for mass is "kg" and not "g". If the unit symbol is defined as "kg", then  
1338 the multiplier is applied to "kg" as a whole and does not replace the "k" in front of the "g". In  
1339 this case, the multiplier of "m" would be used with the unit symbol of "kg" to represent one gram.  
1340 As a text string, this violates the instructions in IEC 80000-1. However, because the unit symbol  
1341 in CIM is treated as a derived unit instead of as an SI unit, it makes more sense to conceptualize  
1342 the "kg" as if it were replaced by one of the proposed replacements for the SI mass symbol. If  
1343 one imagines that the "kg" were replaced by a symbol "P", then it is easier to conceptualize the  
1344 multiplier "m" as creating the proper unit "mP", and not the forbidden unit "mkg".  
1345 Table 119 shows all literals of UnitMultiplier.

1346 **Table 119 – Literals of RemedialActionProfile::UnitMultiplier**

literal	value	description
none	0	No multiplier or equivalently multiply by 1.
M	6	Mega $10^{**6}$ .

1347

1348 **3.103 (NC) ValueOffsetKind enumeration**

- 1349 The kind of the value offset.

1350 Table 120 shows all literals of ValueOffsetKind.

1351 **Table 120 – Literals of RemedialActionProfile::ValueOffsetKind**

literal	value	description
absolute		Value of the range constraint is replacing the attribute value referenced by the PropertyReference in a determined operational scenario.
incremental		Value of the range constraint is incrementing the attribute value referenced by the PropertyReference in a determined operational scenario.
incrementalPercentage		Value of the range constraint is incrementing in percentage the attribute value referenced by the PropertyReference in a determined operational scenario.

1352

### 1353 3.104 ActivePower datatype

1354 Product of RMS value of the voltage and the RMS value of the in-phase component of the  
1355 current.

1356 Table 121 shows all attributes of ActivePower.

1357 **Table 121 – Attributes of RemedialActionProfile::ActivePower**

name	mult	type	description
multiplier	0..1	<a href="#">UnitMultiplier</a>	(const=M)
unit	0..1	<a href="#">UnitSymbol</a>	(const=W)
value	0..1	<a href="#">Float</a>	

1358

### 1359 3.105 PerCent datatype

1360 Percentage on a defined base. For example, specify as 100 to indicate at the defined base.

1361 Table 122 shows all attributes of PerCent.

1362 **Table 122 – Attributes of RemedialActionProfile::PerCent**

name	mult	type	description
value	0..1	<a href="#">Float</a>	Normally 0 to 100 on a defined base.
unit	0..1	<a href="#">UnitSymbol</a>	(const=none)
multiplier	0..1	<a href="#">UnitMultiplier</a>	(const=none)

1363

### 1364 3.106 ReactivePower datatype

1365 Product of RMS value of the voltage and the RMS value of the quadrature component of the  
1366 current.

1367 Table 123 shows all attributes of ReactivePower.

1368 **Table 123 – Attributes of RemedialActionProfile::ReactivePower**

name	mult	type	description
value	0..1	<a href="#">Float</a>	
unit	0..1	<a href="#">UnitSymbol</a>	(const=VAr)
multiplier	0..1	<a href="#">UnitMultiplier</a>	(const=M)

1369

1370 **3.107 Seconds datatype**

1371 Time, in seconds.

1372 Table 124 shows all attributes of Seconds.

1373 **Table 124 – Attributes of RemedialActionProfile::Seconds**

name	mult	type	description
value	0..1	<a href="#">Float</a>	Time, in seconds
unit	0..1	<a href="#">UnitSymbol</a>	(const=s)
multiplier	0..1	<a href="#">UnitMultiplier</a>	(const=none)

1374

1375 **3.108 Boolean primitive**

1376 A type with the value space "true" and "false".

1377 **3.109 Duration primitive**

1378 Duration as "PnYnMnDTnHnMnS" which conforms to ISO 8601, where nY expresses a number  
 1379 of years, nM a number of months, nD a number of days. The letter T separates the date  
 1380 expression from the time expression and, after it, nH identifies a number of hours, nM a number  
 1381 of minutes and nS a number of seconds. The number of seconds could be expressed as a  
 1382 decimal number, but all other numbers are integers.

1383 **3.110 Float primitive**

1384 A floating point number. The range is unspecified and not limited.

1385 **3.111 Integer primitive**

1386 An integer number. The range is unspecified and not limited.

1387 **3.112 String primitive**

1388 A string consisting of a sequence of characters. The character encoding is UTF-8. The string  
 1389 length is unspecified and unlimited.

1390

1391

1392

## **Annex A (informative): Sample data**

### **1393 A.1 General**

1394 This Annex is designed to illustrate the profile by using fragments of sample data. It is not meant  
1395 to be a complete set of examples covering all possibilities of using the profile. Defining a  
1396 complete set of test data is considered a separate activity to be performed for the purpose of  
1397 setting up interoperability testing and conformity related to this profile.

### **1398 A.2 Sample instance data**

1399 Test data files are available in the CIM EG SharePoint.
