## Revision History

Version	Release	Date	Comments
0	0	2015-12-18	First drafting of the document based on discussion with CGMES project team on data exchanges.
0	1	2016-01-16	Version taking into account the comments issued after WG EDI review.
1	0	2016-01-21	Version approved by Market Committee

79

80 **1 Objective**

81 The purpose of this document is to enable the exchange of information related to generation  
82 and load shift key (GSK and LSK).

83 GSK and LSK are to be used together with an individual grid model (IGM) or a common grid  
84 model (CGM) as soon as studies are to be carried out. Indeed, they enable to handle the  
85 changes in generation profile or load profile, e.g. ,on a base case as starting point, carry out a  
86 study if there is an increase of X MW in the total load (compute the new load profile at the  
87 electrical nodes to comply with the change of load as well as the new generation injections).

88 Different modes to apply GSK and LSK are existing; the purpose of this document is not to state  
89 the most suitable one but only to provide a way to exchange this information.

90 This document describes the data model of the GSK and LSK document.

91 **2 The GSK and LSK data exchange process**

92 **2.1 Overall business context**

93 The GSK and LSK are computed by the TSO in charge of the area and provided to the actors  
94 who needs to carry out network studies; these network studies could be coordinated  
95 transmission capacity calculation, flow-based market coupling, network studies, etc.

96 Generation shift key are needed to transform any change in the balance of one bidding zone  
97 into a change of injections in the nodes of that area.

98 Generation and load shift keys are elaborated on the basis of the forecast information about  
99 the generating units and loads. In order to avoid newly formed unrealistic congestions caused  
100 by the process of generation shift, TSOs should be able to define both generation shift key  
101 (GSK) and load shift key (LSK):

- 102 • Generation shift: GSK constitute a list specifying those generators that shall contribute to  
103 the shift.
- 104 • Load shift: LSK constitute a list specifying those load that shall contribute to the shift in  
105 order to take into account the contribution of generators connected to lower voltage levels  
106 (implicitly contained in the load figures of the nodes connected to the EHV grid).

107 GSK and LSK are defined for:

- 108 • A bidding zone, named in the document as "a".
- 109 • A time interval: GSK and LSK are dedicated to individual daily hours in order to model  
110 differences between peak and off-peak conditions per TSO.

111 If GSK and LSK are defined, a participation factor is also given:

- 112 • G(a) Participation factor for generation nodes in area "a",
- 113 • L(a) Participation factor for load nodes in area "a".

114 The sum G(a) and L(a), for each area, is to be equal to 1 (i.e. 100%).

115 Then depending on the calculation methods, TSO can define the following information  
116 associated to each generation and load nodes:

- 117 • participation factor,
- 118 • or maximum and minimum absolute power,
- 119 • or maximum and minimum relative power.

120 **2.2 Business Description**

121 Four types of shift can be defined in GSK and LSK lists:

- 122 • Proportional to base case generation or load;

- 123     • Proportional to the participation factors;  
 124     • Proportional to the remaining available capacity;  
 125     • Depending upon a merit order list.  
 126 These types are described here after.

127 **2.2.1 Proportional to base case generation or load**

128 Shift in defined generation/load nodes is proportional to the base case generation/load within  
 129 an area "a":

- 130     •  $P_g(n, a)$  active generation in node n, belonging to area a (node n defined in GSK list),  
 131     •  $P_l(n, a)$  active load in node n, belonging to area a (node n defined in LSK list).

132 The participation of node n in the shift, among selected generation nodes (GSK) is given by:

133 
$$K_g(n, a) = G(a) \frac{P_g(n, a)}{\sum_i P_g(i, a)}$$

134 The participation of node n in the shift, among selected load nodes (LSK) is given by:

135 
$$K_l(n, a) = L(a) \frac{P_l(n, a)}{\sum_i P_l(i, a)}$$

136 The sum of G(a) and L(a) for each area is to be equal to 1 (i.e. 100%).

137 Table 1 lists the attributes to be described in such a case.

138 **Table 1 - Dependency**

Attribute	Generation	Load
domain.mRID	The identification of the area related to all the GSK and/or LSK area(s) described in the document	
subject_Domain.mRID	The identification of the area, a, related to GSK and/or LSK.	
SKBlock_TimeSeries		
businessType	B42	B42
mkPSRTType.psrType	A04 – generation	A05 – load
quantity.quantity	Value of G(a) If not provided, it is assumed a 1 value.	Value of L(a) If not provided, it is assumed a 1 value.
flowDirection	Not used	
measurement_Unit.name	C62 – unit for dimensionless quantities	
attributeInstanceComponent.position	Not used	
RegisteredResource	The identification of the generation or load nodes involved in the shift  Note: If no registeredResource is provided, the factor is applied to all the generations and/or loads of the subject domain network model.	
mRID	The identification of the resource	
sK_ResourceCapacity.defaultCapacity	Not used	
sK_ResourceCapacity.maximumCapacity	Not used	
sK_ResourceCapacity.minimumCapacity	Not used	

139    **2.2.2 Proportional to the participation factors**

140    For a list of generation nodes or load nodes in an area, a, individual participation factors are  
141    defined. The shift in generation/load node is computed as:

142    
$$K_g(n, a) = G(a) \frac{k_g(n, a)}{\sum_i k_g(i, a)}$$
 for generation

143    And  $K_l(n, a) = L(a) \frac{k_l(n, a)}{\sum_i k_l(i, a)}$  for load.

144    Table 2 lists the attributes to be described in such a case.

145    **Table 2 - Dependency**

Attribute	Generation	Load
domain.mRID	The identification of the area related to all the GSK and/or LSK area(s) described in the document	
subject_Domain.mRID	The identification of the area, a, related to GSK and/or LSK.	
SKBlock_TimeSeries		
businessType	B43	B43
mkPSRTyp.psrType	A04 – generation	A05 – load
quantity.quantity	Value of G(a)	Value of L(a)
flowDirection	Not used	
measurement_Unit.name	C62 – unit for dimensionless quantities	
attributeInstanceComponent.position	Not used	
RegisteredResource	The identification of the generation or load nodes involved in the shift	
mRID	The identification of the resource	
sk_ResourceCapacity.defaultCapacity	$k_g(n, a)$ of the resource	$k_l(n, a)$ of the resource
sk_ResourceCapacity.maximumCapacity	Not used	
sk_ResourceCapacity.minimumCapacity	Not used	

146

147    **2.2.3 Proportional to the remaining available capacity**

148    Depending upon the shift (up for positive shift or down for negative shift), the generation  
149    changes are computed proportionally to the remaining available generation margin:

150    • For a positive shift  $P(n, a) = P_0(n, a) + \Delta E \frac{P_{\max}(n, a) - P_0(n, a)}{\sum_i (P_{\max}(i, a) - P_0(i, a))}$

151    • For a negative shift  $P(n, a) = P_0(n, a) + \Delta E \frac{P_0(n, a) - P_{\min}(n, a)}{\sum_i (P_0(i, a) - P_{\min}(i, a))}$

152    Where:

153    •  $P(n, a)$  is the generation output of unit n in area a following the shift.

154    •  $P_0(n, a)$  is the actual generation output in the base case

- 155    •  $\Delta E$  is the generation shift.  
 156    •  $P_{\max}(i,a)$  is the maximum output of generation i in area a.  
 157    •  $P_{\min}(i,a)$  is the minimum output of generation I in area a.  
 158    Table 3 lists the attributes to be described in such a case.

159    **Table 3 - Dependency**

Attribute	Generation	Load
domain.mRID	The identification of the area related to all the GSK and/or LSK area(s) described in the document	
subject_Domain.mRID	The identification of the area, a, related to GSK and/or LSK.	
SKBlock_TimeSeries		Not used
businessType	B44	Not used
mkPSRTyp.psrType	A04 – generation	Not used
quantity.quantity	Not used	
flowDirection	A01 – for positive shift A02 – for negative shift	Not used
measurement_Unit.name	The unit of measurement for $P_{\max}(i,a)$ or $P_{\min}(i,a)$	Not used
attributeInstanceComponent.position	Not used	
RegisteredResource		Not used
mRID	The identification of the resource	Not used
sk_ResourceCapacity.defaultCapacity	Not used	
sk_ResourceCapacity.maximumCapacity	$P_{\max}(i,a)$	Not used
sk_ResourceCapacity.minimumCapacity	$P_{\min}(i,a)$	Not used

- 160
- 161    **2.2.4    Depending upon a merit order list**
- 162    The chosen generation nodes shifts up or down according to the merit order list defined in the  
 163    group GSKup (GSK time series with a A01 flowDirection) or GSKdown (GSK time series with a  
 164    A02 flowDirection), as described following:
- 165    • Upward list contains the generation nodes which performs the total positive shift in area a.  
 166    • Downward list contains the generation nodes which performs the total negative shift in area  
 167    a.
- 168    The merit order position is defined in the attribute attributeInstanceComponent.position, i.e. it  
 169    is the order to be applied to generation node to be shifted simultaneously. It means that the  
 170    first group (number defined with merit order position) of generating nodes are shifted together  
 171    and if it is not sufficient, the next group generating nodes are used to complete the total shift,  
 172    and so on.
- 173    The total shift is distributed to the last group of merit order position generation nodes  
 174    proportionally to their available margin as defined for reserve shift.
- 175    Table 4 lists the attributes to be described in such a case.

176

**Table 4 - Dependency**

Attribute	Generation	Load
domain.mRID	The identification of the area related to all the GSK and/or LSK area(s) described in the document	
subject_Domain.mRID	The identification of the area, a, related to GSK and/or LSK.	
SKBlock_TimeSeries		Not used
businessType	B45	Not used
mkPSRTyp.psrType	A04 – generation	Not used
quantity.quantity	Not used	
flowDirection	A01 – for positive shift A02 – for negative shift	Not used
measurement_Unit.name	The unit of measurement for $P_{\max}(i,a)$ or $P_{\min}(i,a)$	Not used
attributeInstanceComponent.position	Order for merit order position (the first group shall have the value 1, the second the value 2, etc.).	Not used
RegisteredResource		Not used
mRID	The identification of the resource	Not used
sK_ResourceCapacity.defaultCapacity	Not used	
sK_ResourceCapacity.maximumCapacity	$P_{\max}(i,a)$	Not used
sK_ResourceCapacity.minimumCapacity	$P_{\min}(i,a)$	Not used

177

### 178 2.3 Business rules

179 All the business rules defined in the IEC 62325-351 are to be applied for this document.

180 An acknowledgment document, IEC 62325-451-1, is to be issued by the receiver of this GLSK  
181 document.

182 In addition, there are some specific rules for the mRID of the RegisteredResource; the mRID  
183 attribute is composed of the code and the coding scheme identification:

184 • When the coding scheme “EIC” (energy identification coding scheme, attribute value “A01”)  
185 is used, the object identified is usually an aggregation, e.g. a production unit composed with  
186 different generating units. In such a case, it is assumed that the values provided are to be  
187 applied to each individual generating units. A mapping between the EIC code and the mRID  
188 of each generating unit is to be provided. This rule is to be applied depending upon the  
189 power output of each generating unit:

- 190 – For a hydro power plant composed of 10 identical generating units, the mRID (W type  
191 EIC code) of the hydro power plant as a production unit can be used. In such a case,  
192 the values are to be applied to each individual generating units.
- 193 – For a nuclear power plant, usually each nuclear reactor has a W type EIC code as mRID.

194 • When the coding scheme “CGM” (common grid model coding scheme, attribute value “A02”)  
195 is used, the object has the same granularity as in the CGMES requirements for the common  
196 grid model or the individual grid model (IGM).

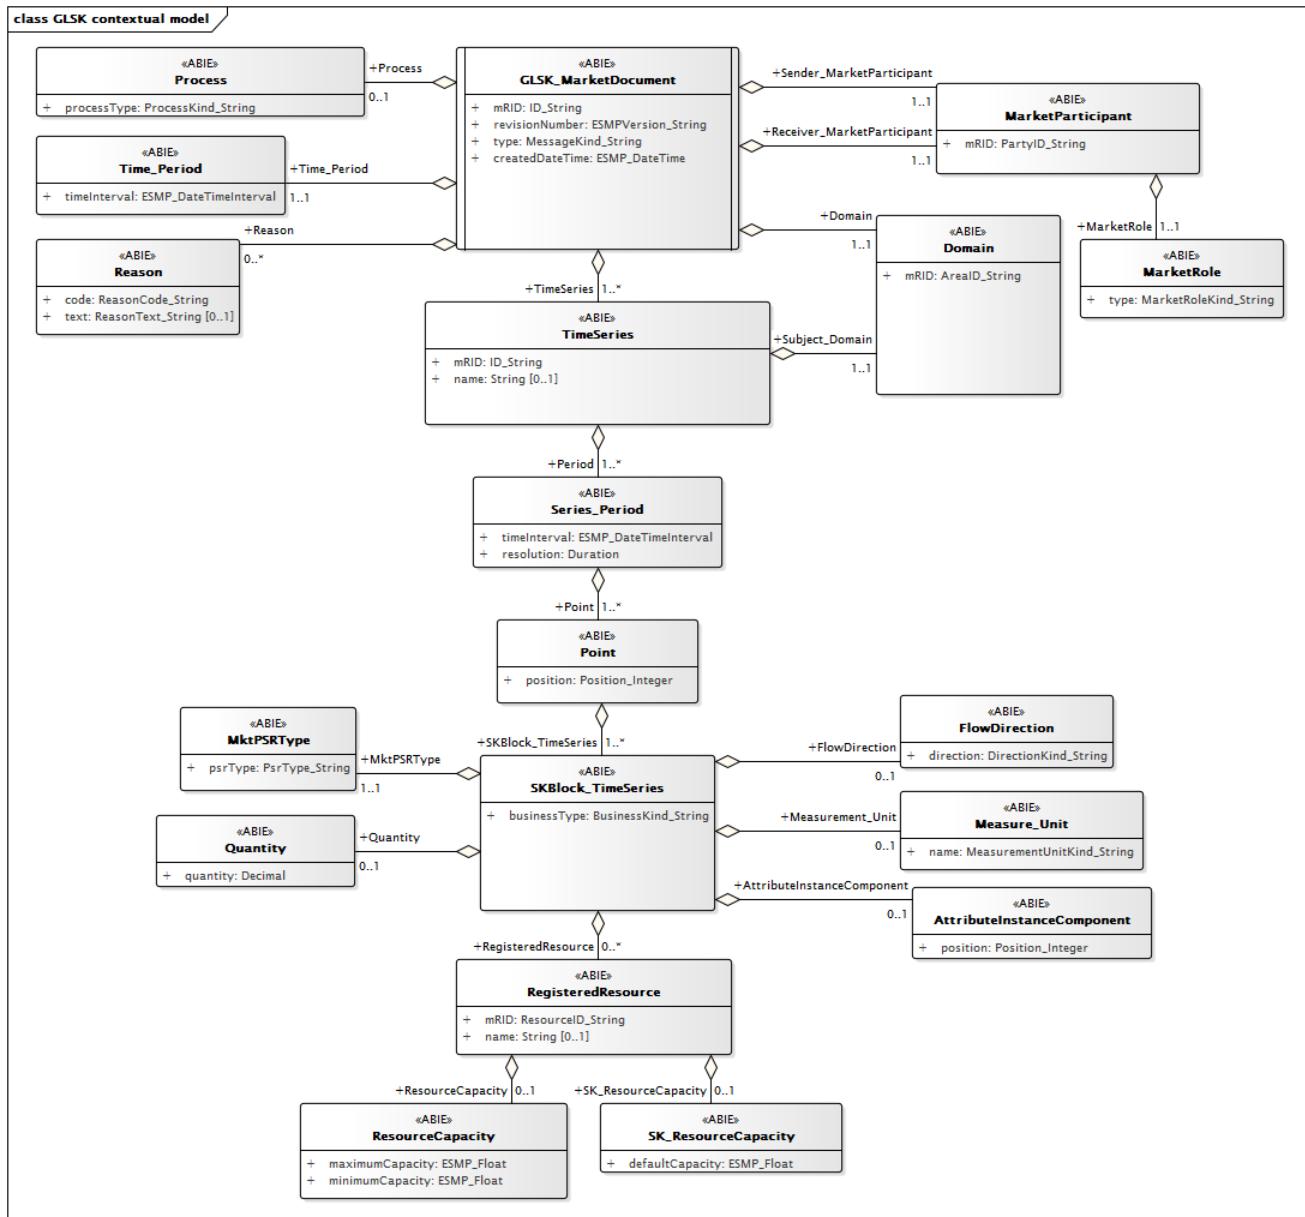

197 The following codes values are to be used in XML instances in the GLSK\_MarketDocument  
198 section:

- 199 • type: A95 for “Configuration document”
- 200 • process.processType: A01 for “Day ahead”

### 221    2.5.3    Detailed GLSK assembly model

222 2.5.3.1 GLSK MarketDocument root class

223 This document enables to exchange information about the GSK and LSK factors.

224 - Generation shift key (GSK): list specifying those generators that shall contribute to the shift.

225 - Load shift key (LSK): list specifying those load that shall contribute to the shift in order to take  
226 into account the contribution of generators connected to lower voltage levels.

227 If GSK and LSK are defined, a participation factor is also given:

## 228 - G(a) Participation factor for generation nodes

## 229 - L(a) Participation factor for load nodes

230 The sum of G(a) and L(a) for each area has to be to 1 (i.e. 100%).

231 An electronic document containing the information necessary to satisfy the requirements of a  
232 given business process.

233 Table 7 shows all attributes of GLSK\_MarketDocument.

**Table 7 - Attributes of GLSK assembly model::GLSK\_MarketDocument**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	mRID ID_String	The unique identification of the document being exchanged within a business process flow.
1	[1..1]	revisionNumber ESMPVersion_String	The identification of the version that distinguishes one evolution of a document from another.
2	[1..1]	type MessageKind_String	The coded type of a document. The document type describes the principal characteristic of the document.
3	[0..1]	process.processType ProcessKind_String	The identification of the nature of process that the document addresses.
4	[1..1]	sender_MarketParticipant.mRID PartyID_String	The identification of a party in the energy market. --- Document owner.
5	[1..1]	sender_MarketParticipant.marketRole.type MarketRoleKind_String	The identification of the role played by a market player. --- Document owner.

Order	mult.	Attribute name / Attribute type	Description
6	[1..1]	receiver_MarketParticipant.mRID PartyID_String	The identification of a party in the energy market. --- Document recipient.
7	[1..1]	receiver_MarketParticipant.marketRole.type MarketRoleKind_String	The identification of the role played by a market player. --- Document recipient.
8	[1..1]	createdDateTime ESMP_DateTime	The date and time of the creation of the document.
9	[1..1]	time_Period.timeInterval ESMP_DateTimeInterval	The start and end date and time for a given interval. --- The beginning and ending date and time of the period covered in the document.
10	[1..1]	domain.mRID AreaID_String	The unique identification of the domain. --- The identification of the domain that is covered in the settlement document.

235

236 Table 8 shows all association ends of GLSK\_MarketDocument with other classes.

237 **Table 8 - Association ends of GLSK assembly model::GLSK\_MarketDocument with  
238 other classes**

Order	mult.	Class name / Role	Description
11	[1..*]	TimeSeries TimeSeries	Association Based On: GLSK contextual model::TimeSeries.TimeSeries[1..*] ----- GLSK contextual model::GLSK_MarketDocument.[]
12	[0..*]	Reason Reason	Association Based On: GLSK contextual model::Reason.Reason[0..*] ----- GLSK contextual model::GLSK_MarketDocument.[]

239

### 240 **2.5.3.2 Point**

241 The identification of the values being addressed within a specific interval of time.

242 Table 9 shows all attributes of Point.

243 **Table 9 - Attributes of GLSK assembly model::Point**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	position Position_Integer	A sequential value representing the relative position within a given time interval.

244

245 Table 10 shows all association ends of Point with other classes.

246 **Table 10 - Association ends of GLSK assembly model::Point with other classes**

Order	mult.	Class name / Role	Description
1	[1..*]	SKBlock_TimeSeries SKBlock_TimeSeries	The TimeSeries provides additional information related to a Position within a given time interval. Association Based On: GLSK contextual model::SKBlock_TimeSeries.SKBlock_TimeSeries[1..*] ----- GLSK contextual model::Point.[]

247

248 **2.5.3.3 Reason**

249 The motivation of an act.

250 Table 11 shows all attributes of Reason.

251 **Table 11 - Attributes of GLSK assembly model::Reason**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	code ReasonCode_String	The motivation of an act in coded form.
1	[0..1]	text ReasonText_String	The textual explanation corresponding to the reason code.

252

253 **2.5.3.4 RegisteredResource**

254 A resource that is registered through the market participant registration system. Examples  
255 include generating unit, load, and non-physical generator or load.

256 Table 12 shows all attributes of RegisteredResource.

257 **Table 12 - Attributes of GLSK assembly model::RegisteredResource**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	mRID ResourceID_String	The unique identification of a resource.
1	[0..1]	name String	The name is any free human readable and possibly non unique text naming the object.
2	[0..1]	sK_ResourceCapacity.defaultCapacity ESMP_Float	Default capacity. --- The shift key of the registered resource.
3	[0..1]	resourceCapacity.maximumCapacity ESMP_Float	The maximum capacity is used with the remaining available capacity, or merit order methods.
4	[0..1]	resourceCapacity.minimumCapacity ESMP_Float	The minimum capacity is used with the remaining available capacity, or merit order methods.

258

259 **2.5.3.5 Series\_Period**

260 The identification of the period of time corresponding to a given time interval and resolution.

261 Table 13 shows all attributes of Series\_Period.

262 **Table 13 - Attributes of GLSK assembly model::Series\_Period**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	timeInterval ESMP_DateTimeInterval	The start and end time of the period.
1	[1..1]	resolution Duration	The definition of the number of units of time that compose an individual step within a period.

263

264 Table 14 shows all association ends of Series\_Period with other classes.

265 **Table 14 - Association ends of GLSK assembly model::Series\_Period with other classes**

Order	mult.	Class name / Role	Description
2	[1..*]	Point Point	Association Based On: GLSK contextual model::Point.Point[1..*] ----- GLSK contextual model::Series_Period.[]

266

267 **2.5.3.6 SKBlock\_TimeSeries**

268 4 types of shift keys can be defined in GSK and LSK lists:

- 269 • B42: proportionally to base case generation or load.  
 270 • B43: according to the participation factors.  
 271 • B44: proportionally to the remaining available capacity.  
 272 • B45: generating nodes shift according to different merit order lists for shifting up and down.

273 A set of time-ordered quantities being exchanged in relation to a product.

274 In the ESMP profile, the TimeSeries provides not only time-ordered quantities but also time-  
 275 ordered information.

276 Table 15 shows all attributes of SKBlock\_TimeSeries.

277 **Table 15 - Attributes of GLSK assembly model::SKBlock\_TimeSeries**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	businessType BusinessKind_String	The identification of the nature of the time series.
1	[1..1]	mktPSRTyp.psrType PsrType_String	The coded type of a power system resource. --- The type of the resources within the time series, i.e. either generation for GSK or load for LSK.
2	[0..1]	quantity.quantity Decimal	The quantity value. The association role provides the information about what is expressed. --- The shift key value applicable to all resources. This is a value in the range [0,1]. The quantity information associated to a TimeSeries.
3	[0..1]	flowDirection.direction DirectionKind_String	The coded identification of the direction of energy flow. --- For the merit order list (GSK or LSK), provide the information if the registered resource contributes either as "UP" or "DOWN" units.
4	[0..1]	measurement_Unit.name MeasurementUnitKind_String	The identification of the formal code for a measurement unit (UN/ECE Recommendation 20). --- The unit of measure of the attributes based on ResourceCapacity class.
5	[0..1]	attributeInstanceComponent.position Position_Integer	A sequential value representing a relative sequence number. --- To be used only for merit order participation factor. This attribute provides the identification of order in which the groups are called (1 is the first, 2 the second, etc.)

278

279 Table 16 shows all association ends of SKBlock\_TimeSeries with other classes.

280      **Table 16 - Association ends of GLSK assembly model::SKBlock\_TimeSeries with other**  
 281      **classes**

Order	mult.	Class name / Role	Description
6	[0..*]	RegisteredResource RegisteredResource	The identification of a resource associated with a TimeSeries. Association Based On: GLSK contextual model::RegisteredResource.RegisteredResource[0..*] ----- GLSK contextual model::SKBlock_TimeSeries.]

282

### 283      **2.5.3.7    TimeSeries**

284      A set of time-ordered quantities being exchanged in relation to a product.

285      Table 17 shows all attributes of TimeSeries.

286      **Table 17 - Attributes of GLSK assembly model::TimeSeries**

Order	mult.	Attribute name / Attribute type	Description
0	[1..1]	mRID ID_String	A unique identification of the time series.
1	[0..1]	name String	The name is any free human readable and possibly non unique text naming the object.
2	[1..1]	subject_Domain.mRID AreaID_String	The unique identification of the domain. --- The identification of the area.

287

288      Table 18 shows all association ends of TimeSeries with other classes.

289      **Table 18 - Association ends of GLSK assembly model::TimeSeries with other classes**

Order	mult.	Class name / Role	Description
3	[1..*]	Series_Period Period	The receiver shall completely reject documents with any time intervals outside the accounting period. Association Based On: GLSK contextual model::Series_Period.Period[1..*] ----- GLSK contextual model::TimeSeries.]

290

### 291      **2.5.4    Datatypes**

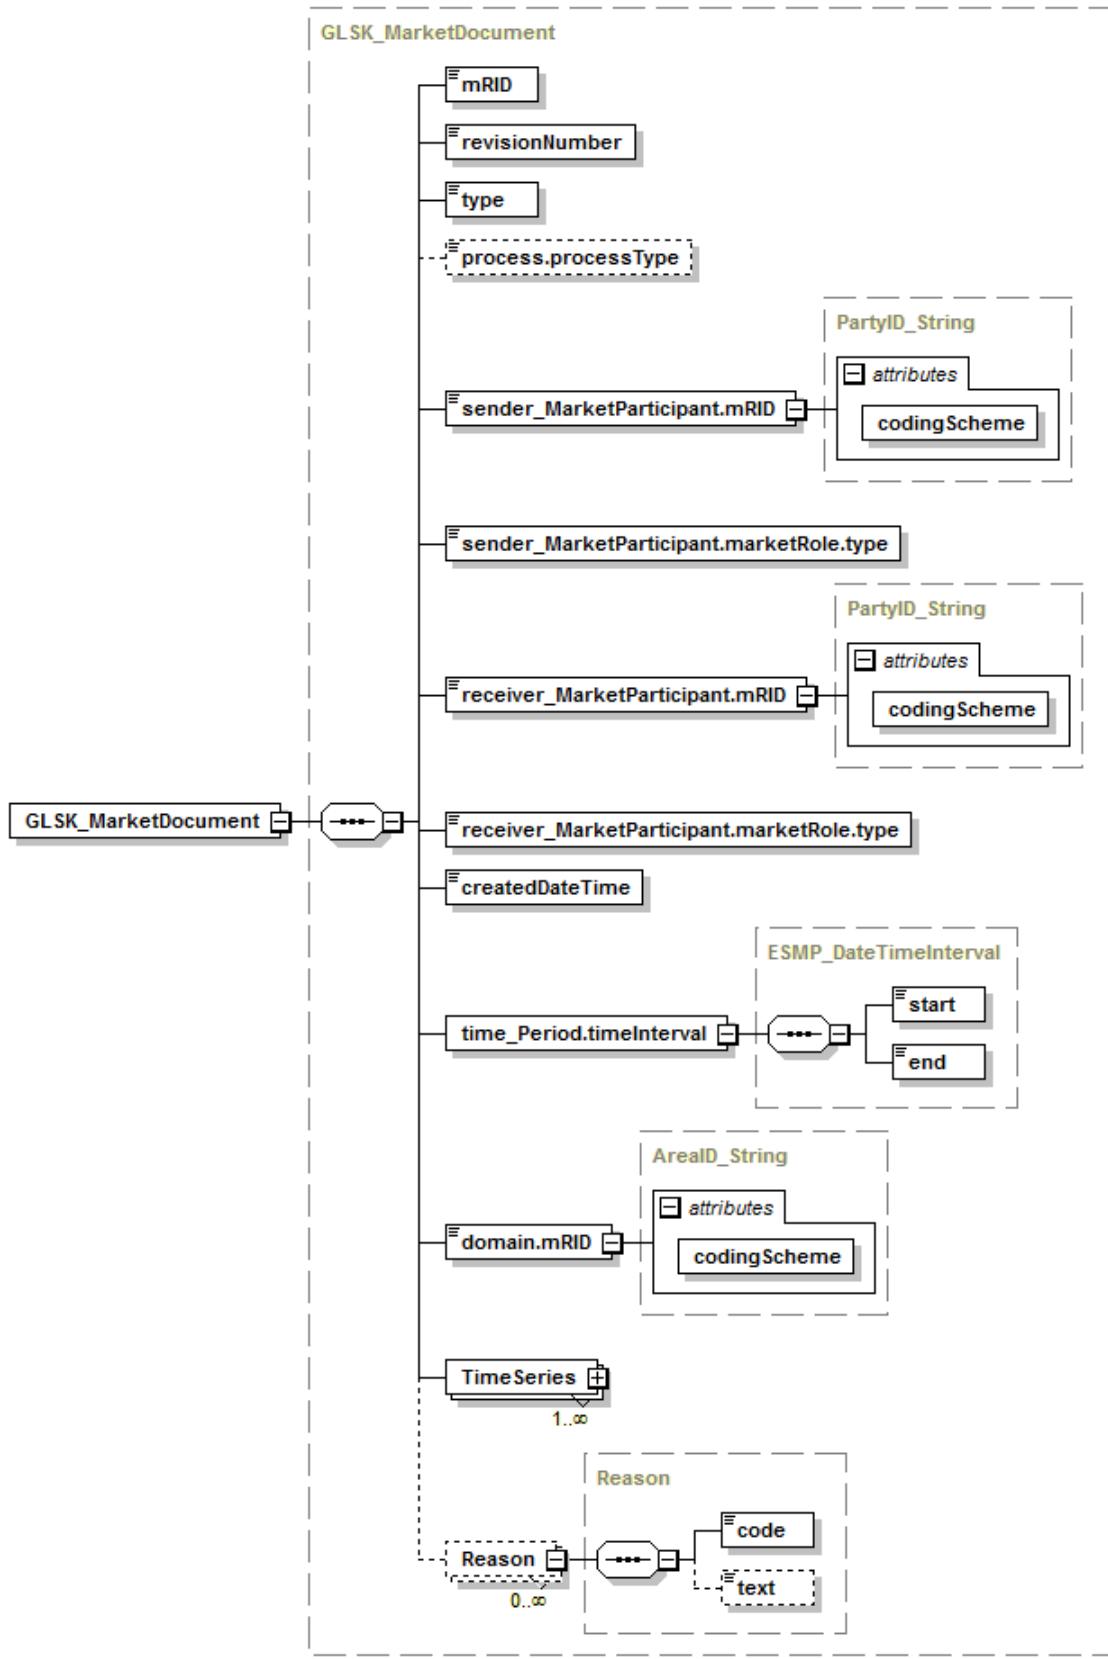

292      The list of datatypes used for the GLSK assembly model is as follows:

- 293      • ESMP\_DateTimeInterval compound
- 294      • AreaID\_String datatype, codelist CodingSchemeTypeList
- 295      • BusinessKind\_String datatype, codelist BusinessTypeList
- 296      • DirectionKind\_String datatype, codelist DirectionTypeList
- 297      • ESMP\_DateTime datatype
- 298      • ESMP\_Float datatype
- 299      • ESMPVersion\_String datatype
- 300      • ID\_String datatype
- 301      • MarketRoleKind\_String datatype, codelist RoleTypeList

- 302     • MeasurementUnitKind\_String datatype, codelist UnitOfMeasureTypeList
- 303     • MessageKind\_String datatype, codelist MessageTypeList
- 304     • PartyID\_String datatype, codelist CodingSchemeTypeList
- 305     • Position\_Integer datatype
- 306     • ProcessKind\_String datatype, codelist ProcessTypeList
- 307     • PsrType\_String datatype, codelist AssetTypeList
- 308     • ReasonCode\_String datatype, codelist ReasonCodeTypeList
- 309     • ReasonText\_String datatype
- 310     • ResourceID\_String datatype, codelist CodingSchemeTypeList
- 311     • YMDHM\_DateTime datatype

312 **2.5.5 GLSK\_MarketDocument XML schema**

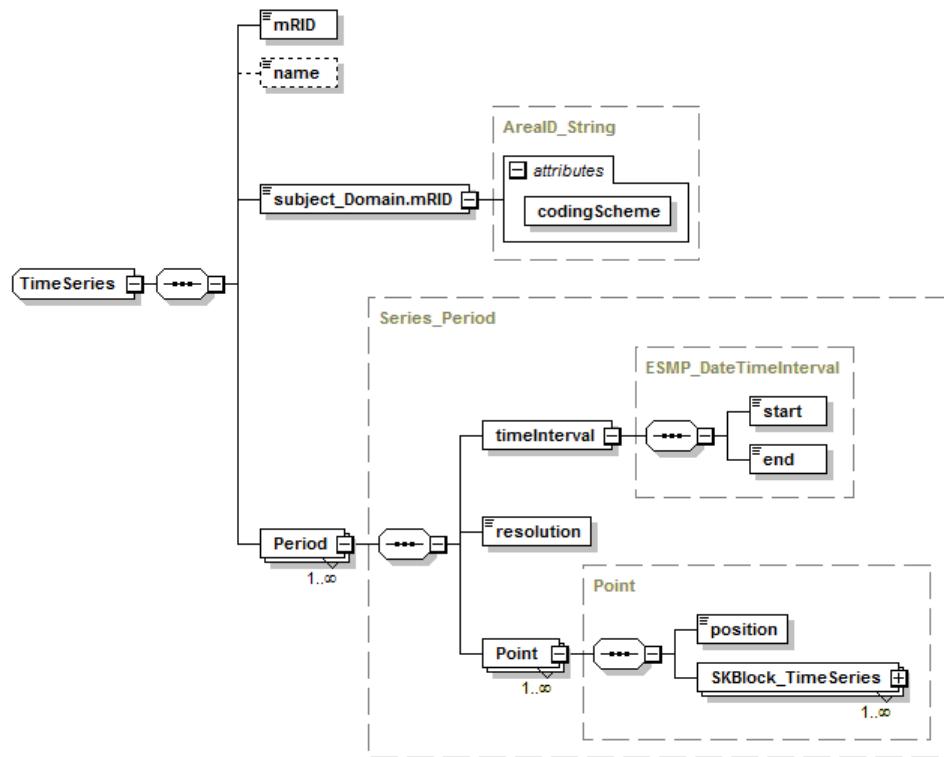

313 Figure 3 to Figure 5 provide the structure of the schema.

314
