

# European report on integration of balancing markets

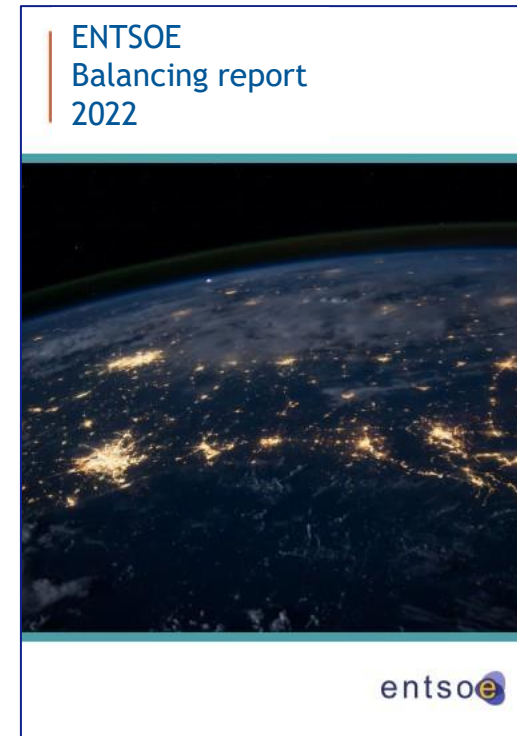

In accordance with Article 59 of the EB Regulation

# 2022 Market and balancing reports

*Monitoring of the implementation of the FCA, CACM, EB Regulations*

*More detailed and complete monitoring of implementation of the EB Regulation (every second year)*

# Balancing report content and KPIs

The EB Regulation defines a list of assessments to be provided:

- Progress made in terms of harmonisation and integration of the balancing markets
- Status of the implementation projects, compatibility between the projects and risks for future integration
- Development of the exchanges of the balancing capacity and the sharing of reserve, possible barriers and prerequisites, potential exchanges of balancing services
- Suitability of standard products
- Need for further harmonisation of standard products and possible effects of non harmonisation, justification for specific products
- Progress of harmonisation of the main features of imbalance settlement as well as consequences due to non harmonisation.

*As « the house » is still under construction, the 2022 report will focus on the progresses made ...*

# Balancing report content and KPIs

The report will present KPIs for balancing markets as required by the EB Regulation:

- Availability of balancing energy bids (standard/specific)
- Volumes and prices of the activated balancing energy (standard/specific)
- Evolution of the prices for the balancing services of the previous years
- Total cost of balancing for the TSO
- Economic efficiency, reliability, inefficiencies and distortions of the balancing markets, focussed on cross border markets (distribution of the cross-border marginal prices, CZC availability and use, satisfaction of the TSO balancing needs, merit order lists ... )
- Monetary savings and gains due to the cross-border exchanges (comparison between situations with/without exchanges)
- Imbalances prices and system imbalances

## **Discussion: suggestions from stakeholders on Balancing report and KPIs?**
