

Preparation for new Expert Groups

Ioannis Theologitis, ENTSO-E

14th Grid Connection European Stakeholder
Committee Meeting

05 June 2019, Ljubljana

...next proposals based on the survey of June 2018

- **Baseline for Type A power generating modules**
 - To identify further requirements to be applied to Type A power generating modules at EU level (cross-border relevance)
 - to include the DSOs perspective
- **Criteria for significant modernization**
 - to guide on RfG application to existing power generating modules
 - to guide on criteria for modernization DSO grids/connections
- **Simultaneous deviations of voltage and frequency**
 - to identify and describe physical phenomena and their impact on equipment design
 - to guide on how to deal best with these phenomena

Feedback received from members

General

- Limited feedback was received
- No additional topics were proposed
- The next on priority three topics remain the immediate topics to address
- **Responders requested to use the time until September's GC ESC meeting to propose possible new topics**
 - *In order to decide/approve new EGs in September's meeting, a survey should be circulated again in July/August to GC ESC members including the new proposals (if any).*

Specific feedback from the DSOs

- For “Criteria for significant modernization”: DSOs propose to focus on the installation connected to the grids and not on the DSO/TSO interface (dealt on MS level)
- For “Simultaneous deviations of voltage and frequency”: low priority
- For “Criteria for significant modernization” and “Baseline for Type A power generating modules”: DSOs suggest to chair the EGs
