# Annex 6 for border France - Spain

- **Specific articles for IFE border:**

- Additional type of return allowed to foster the market liquidity:
  - In addition to the returns allowed in article 38.2, it is allowed a return of a non-constant band of yearly product if monthly product has the same reduction period(s) than yearly product.
- Compensation “yearly cap” for curtailments will only consider the long-term and day-ahead congestion rents:
  - Due to temporary status of IFE intraday explicit auctions and as they are performed by a regional platform, different from JAO, the yearly cap is limited to the auctions revenues managed by JAO to avoid additional complexity. This is a cost efficient approach to ensure an improved firmness for market parties as from 2017 on.
