**Indicative values for Net Transfer Capacities (NTC) in Europe**

Winter 2007-2008, working day, peak hours (non-binding values)

**Legend:**
- Maximum Import in MW: Value agreed by both countries.
- Maximum Export in MW: Different values are estimated between the two countries involved. The lower value is shown on top and the country providing the higher value is specified.
- The country providing no value is specified.

**REMARK:**
These indicative values have been computed by extrapolation from standard situations, in order to evaluate the transfer capacity through a single interface for a typical exchange situation (European Reference Case Map also available on ETSO Website). Thus these figures are only indicative and they are not cumulative (they cannot be summed up). Maximum export and import values per country also intend to clarify this.

**Footnotes:**
1. NTC values are non-binding, are not contractually and commitment terms.
2. NTC values are non-binding, are not contractually and commitment terms.
3. Based on JIEL block (Serbia, Montenegro, FYR of Macedonia).
4. Depending on wind generation levels.
5. No realistic limit.
6. NTC values should be considered separately, are not cumulative and simultaneous.
7. Maximal cumulated value from DE to NL, FR and CH.

**Version:** 3rd December 2007
