Indicative values for Net Transfer Capacities (NTC) in Europe

Winter 2008-2009, working day, peak hours (non-binding values)

WARNING:
These indicative values have been computed by extrapolation from standard situations, in order to evaluate the transfer capacity through a single interface for a typical exchange situation (European Reference Case Map also available on ETSO Website). These indicative values are only indicative and they cannot be summed up. Maximum export and import values per country also intend to clarify this.

Legend:
- NTC in MW - Value agreed by both countries
- NTC in MW - Different values are estimated between the two countries involved. The lower value is shown on top and the country providing the higher value is specified.
- NTC in MW - Value provided by only one country
- The country providing no value is specified.
- No realistic limit (5)

Footnotes:
(1) - Denmark West
(2) - Denmark East
(3) - Maximal cumulated value from DE to NL, FR and CH
(4) - Depending on wind situation in Germany
(5) - ... been replaced by “no realistic limit”.
(6) - Countries are listed in the matrix from the West to the East of Europe
(7) - This refers to the maximal value from GR to BG, MK and AL
(8) - NTC values should be considered separately, are not cumulative and simultaneous
(9) - Structure of GCB : E.ON Netz, ... Pl only provides values in the Interdependent NTC Matrix
(10) - This refers to the maximal value from/to DE, CZ and SK
(11) - This refers to the maximal value from/to FR, DE, AT
