Finland	Sweden	1600	Finland and Sweden
· mariu	Norway	100	Finland and Norway
	·		,
FYROM	Greece	200	Greece
FYROM+Albania+Bulgaria	Greece	600	Greece

These indicative values have been computed by extrapolation from standard situations, in order to evaluate the transfer capacity through a single interface at the same time. Thus these figures should be considered separately and are not cumulative. When the evaluation of a transfer limit requires to use a set of assumption which are too far from usual or foreseeable situation (leading to high inaccuracies), the NTC figure has been replaced by « no realistic limit ».

^{*} JIEL block - Serbia, Montenegro.

These indicative values have been computed by extrapolation from standard situations, in order to evaluate the transfer capacity through a single interface at the same time. Thus these figures should be considered separately and are not cumulative. When the evaluation of a transfer limit requires to use a set of assumption which are too far from usual or foreseeable situation (leading to high inaccuracies), the NTC figure has been replaced by « no realistic limit ».

^{**} NTC values between JIEL block and EPS of BiH are note calculated due to the existence of three independent islands in EPS of BiH.

 $^{^{\}star\star\star}$ These values pertain to the political borders and not to the limits of the control areas.
