

EUROPEX GROUP

- 1) we should clarify the term „Balancing market“; there are several types of balancing markets (run by TSO, market operators, PXs)
- 2) Article 12 – we suggest following:

~~„Each Transmission System Operator~~ Member State of a Coordinated Balancing Area shall delegate each role specified in paragraph 1 of this article to the ~~delegated same~~ party. ~~Each Member State All Transmission System Operators~~ shall be entitled to delegate more than one role to the same party.

Reason: In some European countries this is set by the Energy Act not by the TSO. (Similar as the role „Nominated Electricity Market Operator“ (NEMO) from Governance Guidelines or Network Codes on Capacity Allocation and Congestion Management).

Also the rules for Imbalance settlement is given by the Energy Act and proposed by the Regulatory office.

- 3) we would like to get explanation of terms:
 - a. a proposal for the Balancing Algorithm – Article 6
 - b. Matching Function – Article 12
