

NC EB

Structural changes

Articles on targets

Why and what changes did we make?

Summary of public
consultation

Structure

Readability

Complexity

New consolidated wording in
article with NRA approvals

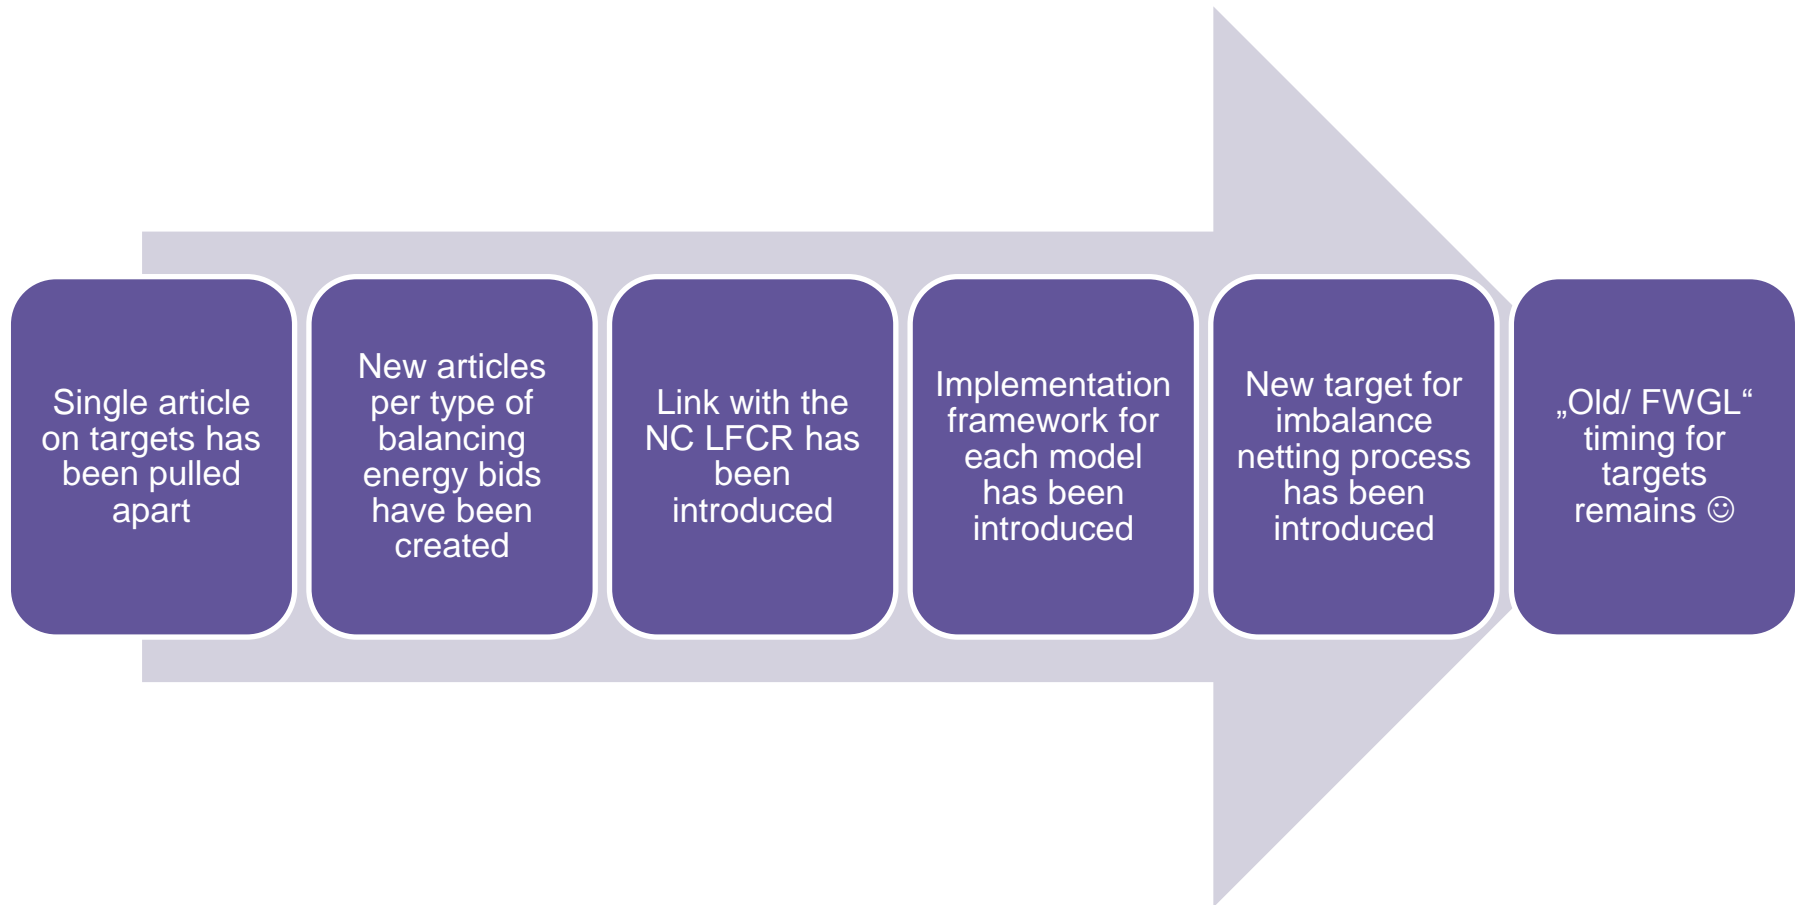

New target section with article
per model

New section on procurement
and transfer of balancing
reserves

New wording and more details
in chapter on XZ capacity

New part of the NC dealing with
central dispatch systems

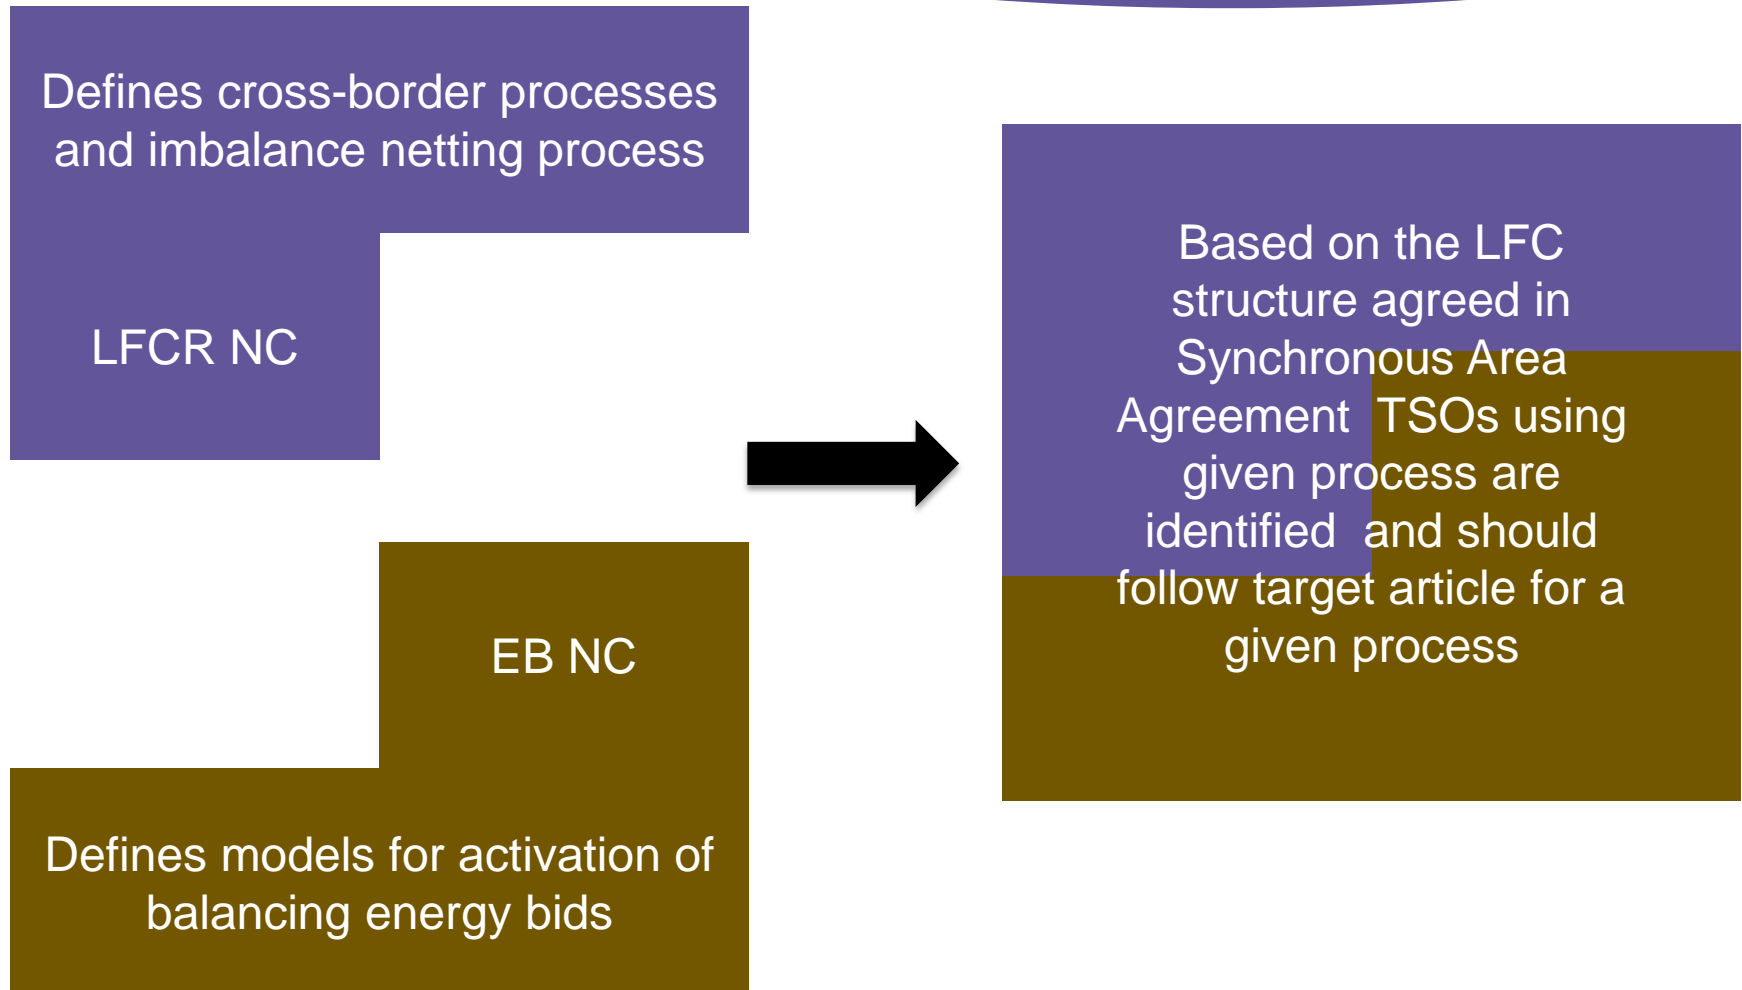

Changes in the target section at glance are...

What are the improvements in target section of the NC?

	Version for the public consultation	Version under developement
Prerequisites of the targets	Not clear	Explicitly described in line with FWGL
DDLs		No change
Target names	„Just“ year reference	Intermediate and target model
Implementation framework	Not included	Included
Geographical extension of the models	Not clear	TSO shall perform a CBA for the configuration of CoBA(s) for the target model

What exactly is the link to the NC LFCR in the target section?

What is the purpose of the implementation framework?

- **To inform market participants what changes are to be done to implement the model within their area**
- **To inform market participants in what CoBA (i.e. for which product) and with what TSO(s) will they have a balancing market**
- **To create a transparent and binding „project plan“ to reach the models**

- **FWGL foresee only the „2 year“ target...**
- **ACER has required that all TSOs using this process shall go further, in comparison to FWGL, and shall develop the target model for imbalance netting process no later than 3Y after entry into the force of the NC**
- **No later than 6Y all TOSs shall implement the target model**

What is the general time-line applied in all target articles?
